Rhode Island Department of Children, Youth and Families (RI DCYF) Safety Report

October 1, 2020 – September 30, 2023 (FFY21 – FFY23)

Introduction

The Rhode Island Department of Children, Youth & Families mission is to promote child safety, permanency and well-being as well as family and community well-being. Promoting safety and reducing the probability of child maltreatment is first and foremost. Child maltreatment can have adverse lifelong impacts as evidenced by the Adverse Childhood Experience (See page 4). This report provides information on child maltreatment in RI that can be used collaboratively among agencies and organizations whose efforts are aimed at promoting child and family safety and well-being throughout the State of RI.

National

Child maltreatment includes all types of abuse and neglect of a child under the age of 18 by a parent, caregiver, or another person in a custodial role (e.g., clergy, coach, teacher). There are four common types of maltreatment.

- Physical Abuse
- Sexual Abuse
- Emotional Abuse
- Neglect

In the United States in the year 2021:

- ✓ An estimated 600,000 children were victims of abuse and neglect in 2021, the most recent year for which there is national data. The actual number of children abused is likely underreported because of the ongoing COVID-19 pandemic in 2021.
- ✓ The youngest children are the most vulnerable. Children in the first year of their life are 15% of all victims, and more than a quarter (28%) of child maltreatment victims are no more than 2 years old.
- ✓ CPS reports may underestimate the true occurrence of abuse and neglect. A non-CPS study estimated that 1 in 7 children experience some form of child abuse or neglect in their lifetimes.
- ✓ About 1,820 children died from abuse or neglect in 2021.
- ✓ Child abuse and neglect is 5 times higher for children in families of low socioeconomic status.
- ✓ The total lifetime cost of child abuse and neglect was estimated at \$592 billion in 2018.

<u>National Statistics on Child Abuse - National Children's Alliance (nationalchildrensalliance.org)</u> Child Maltreatment 2020 (hhs.gov)

Rhode Island

The rate of child maltreatment in RI in FFY23 was 11.4 per 1,000 children (children less than 18 years old). The majority of child maltreatment nationally and in RI is in the form of neglect. In FFY23 in RI approximately 53% of maltreatment was in the form of neglect. Approximately 77.5% of children in RI who were victims of maltreatment in FFY23 were age 11 and younger and children under the age of 1 had the highest prevalence of reported maltreatment. This report provides information on RI DCYF Child Protective Services (CPS) investigations, maltreatment, repeat maltreatment and maltreatment in foster care.

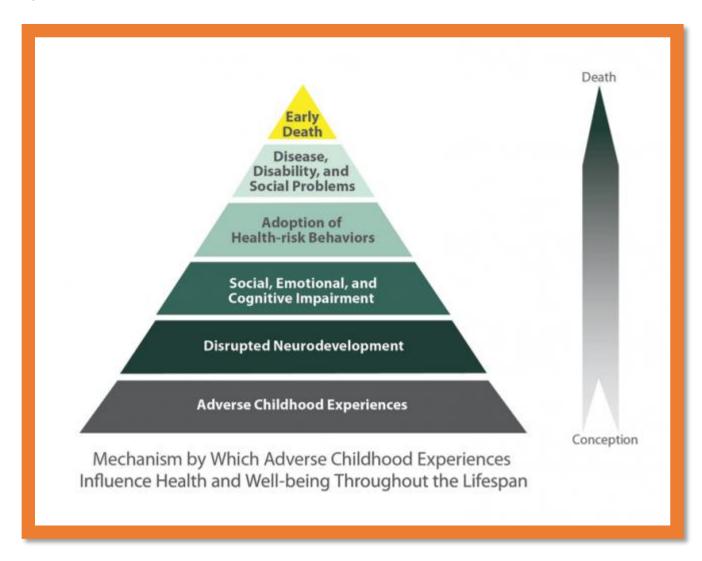

Adverse Childhood Experiences (ACEs)

Childhood experiences, both positive and negative, have a tremendous impact on future violence victimization and perpetration, and lifelong health and opportunity. As such, early experiences are an important public health issue. Much of the foundational research in this area has been referred to as Adverse Childhood Experiences (ACEs).

The CDC-Kaiser Permanente Adverse Childhood Experiences (ACE) Study is one of the largest investigations of childhood abuse and neglect and later-life health and well-being. The original ACE Study was conducted at Kaiser Permanente from 1995 to 1997 with two waves of data collection. Over 17,000 Health Maintenance Organization members from Southern California receiving physical exams completed confidential surveys regarding their childhood experiences and current health status and behaviors. The CDC continues ongoing surveillance of ACEs by assessing the medical status of the study participants via periodic updates of morbidity and mortality data.

The ACE Pyramid represents the conceptual framework for the ACE Study. The ACE Study has uncovered how ACEs are strongly related to development of risk factors for disease, and well-being throughout the life course. Adverse Childhood Experiences have been linked to:

- · risky health behaviors,
- · chronic health conditions
- · low life potential, and
- early death

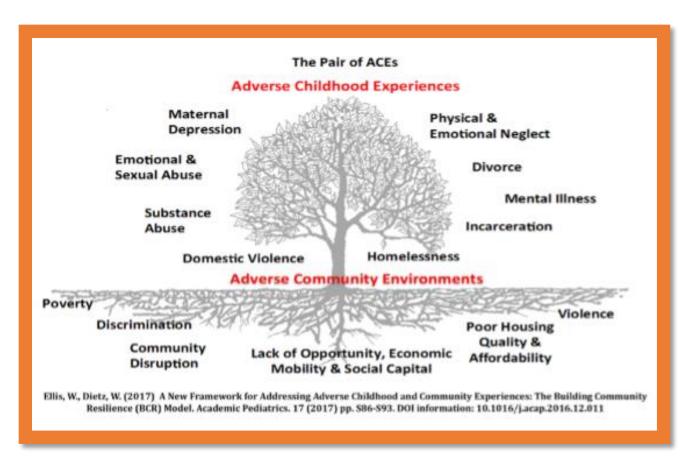

The Building Community Resilience Pair of ACEs

The pair of ACES tree was illustrated to communicate the relationship between adversity within a family and adversity within a community. Adverse childhood experiences (the leaves) can increase a person's risk for chronic stress and adverse coping mechanisms, and result in lifelong chronic illness such as depression, heart disease, obesity and substance abuse. Physical or sexual violence, and abuse or neglect are often less obvious but can exist as chronic stressors.

The tree is planted in poor soil that is steeped in systemic inequities, robbing it of nutrients necessary to support a thriving community. Adverse community environments (the roots) such as a lack of affordable and safe housing, community violence, systemic discrimination, and limited access to social and economic mobility compound one another, creating a negative cycle of worsening soil that results in withering leaves.

By addressing ACEs as pairs, we are able to more readily engage diverse stakeholders in developing policy goals – policies that will support efforts to address adversities that are embedded in communities, but have their roots in systems.

Stats at a Quick Glance

Table 1. provides an overview of RI DCYF Child Protection Service (CPS) contact points with families. The overall aim is to leverage a surveillance system that can readily detect and respond to trends at the system level to better inform interventions aimed at promoting child safety as well as child and family well-being.

Percent and Rate of Indicated Maltreatment Trends

If the child and family present an elevated risk or safety concern, a CPS investigation is conducted that results in either an unfounded investigation or indicated investigation. Among families investigated, the <u>percent</u> of children indicated remained the same from FFY22 to FFY23 (See Table 1). The <u>rate</u> of indicated child victims increased from FFY22 to FFY23. The median age of indicated child victims across the 4 Federal Fiscal Years remained consistent.

A goal in maintaining child safety is to mitigate the risk of a recurrence. The U.S. Children's Bureau measure defines repeat maltreatment as a child indicated within 12 months of a previous indicated maltreatment. In FFY22, 8.3% of children experienced a repeat maltreatment. The median age at the time of the initial maltreatment was 6 years old and the median length of time between the two indicated events was 146 days, over 4 months.

The number of unique children with a report of maltreatment in foster care decreased from FFY22 to FFY23. Throughout this report, foster care is the Federal definition, all children in an out-of-home placement.

Table 1. Stats at a Quick Glance, by Federal Fiscal Year (FFY).

	FFY20	FFY21	FFY22	FFY23
Section 1: Investigations (Maltreatment)				
Number of children investigated	8022	6938	4764	6409
Among children investigated, percent of children indicated	34.0%	37%	39%	39%
Median age at CPS report for indicated child victims (years)	6.0	6.0	6.0	6.0
Rate of indicated child victims (per 1,000 children under 18	13.1	11.6	8.9	11.4
years old in Rhode Island)				
Section 2: Repeat Maltreatment*				
Percent of children who had repeat maltreatment within	8.5%	9.9%	8.3%	
12 months of the initial maltreatment				
Median age at initial maltreatment (years)	5.0	5.0	6.0	
Median length of time between initial and repeat	127.5	168.0	146.0	
maltreatment (days)				
Section 3: Maltreatment in Foster Care**				
Number of victimizations of maltreatment in foster care	52	54	57	50
Number of unique child victims of maltreatment in foster	51	52	55	46
care				
Median age at CPS report (years)	12	10.5	13.0	14

^{*}Unadjusted for age. Children's Bureau adjust for age at initial victimization.

Annual Safety Report

Section 1: Investigations (Maltreatment), FFY21-FFY23

Picture source: Florida Coalition Against Domestic Violence (www.fcadv.org)

Data Presented in Section 1:

The data presented in Section 1 reflect CPS (Child Protection Service) investigations completed during October 1, 2020 – September 30, 2023 (FFY21-FFY23), by federal fiscal year. The data is *presented by investigation disposition year*, meaning that FFY23 data may include investigations reported in previous years like FFY22 or FFY21 but were completed in FFY23. Children age 18 and older at the time of CPS report are excluded (consistent with Children's Bureau reporting).

Section 1: INVESTIGATIONS (MALTREATMENT)

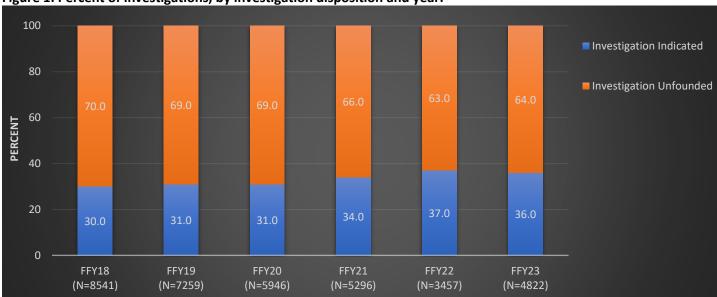

Figure 1. Percent of investigations, by investigation disposition and year.

While the total number of investigations increased from FFY22 to FFY23, the percent of indicated investigations decreased slightly from FFY22 to FFY23.

During 2018, the volume of CPS investigations resulting from the increased volume of CPS reports challenged staffs' ability to respond in accordance with policy. . In July of 2019, the Structured Decision-Making (SMD) Hot Line Screening Tool was implemented to promote consistent practice related to the screening of CPS reports. These efforts were designed to improve efficiency and promote enhanced outcomes. In November of 2019, the SAFE Practice Model was implemented. SAFE shifts from an incident and compliance-based focus when assessing child-safety to the assessment of how a family functions on a day to day basis. The Family Functioning Assessment and On-going Family Functioning Assessment and Service Plan were launched in our electronic case record. The implementation of a Best Practice Model was designed to promote consistent and accurate decisions about child safety and well-being and improve outcomes for children and families. The tools associated with SAFE were implemented in the Department's data system. Since implementation of the SDM tool and SAFE model, there has been a decrease in total number of reports screened in for investigation, and an increase in percent indicated investigations. This signals that there is more precision in report screening for investigations.

⁻ Data unduplicated by investigation.

⁻ Investigation level data reflect investigation level findings. A child may have indicated investigation even if all allegations are unfounded due to another child in the same investigation case being indicated.

REPORTER CALLS INVESTIGATIONS (MALTREATMENT), continued

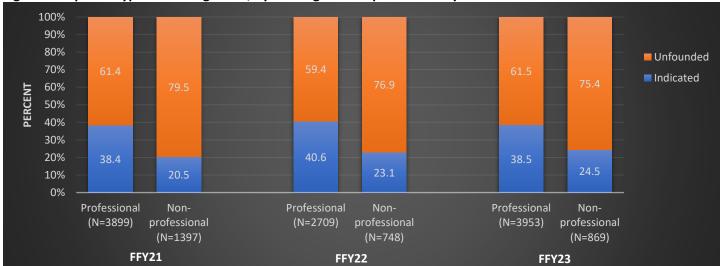

Figure 2. Reporter type of investigations, by investigation disposition and year.

Rhode Island is a mandatory reporting state wherein any person witnessing or having suspicion of child maltreatment are required to notify RI DCYF. Reporters can by classified into two subpopulations, reporters who are reporting in their professional role, "professional", and reporters who are reporting not in a professional role, "non-professional". Over the three years, investigations reported by a professional have a greater percentage of resulting in an indicated finding compared to investigations reported by non-professional reporters (See Figure 2).

Data notes:

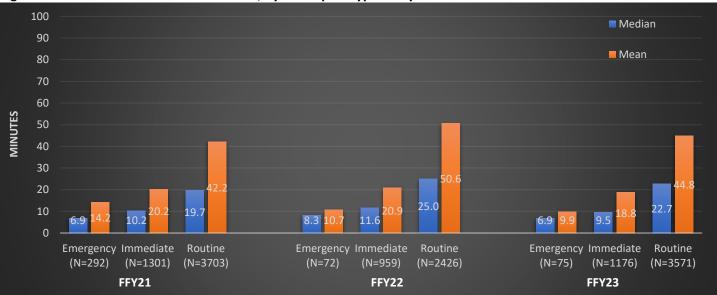

- Data unduplicated by investigation and duplicated by child. Each investigation is counted once, but a child may be counted more than once if had multiple investigations.
- Professional includes reporter type of assistant principal, attendance officer, CPI, child advocate office, child care, child day care center, child day care home, clinic or hospital physician counselor, courts, DCYF attorney, DCYF probation/parole officer, DCYF social worker, DHS personnel, dental professional, Department of Corrections personnel, emergency services personnel, hospital social worker, medical examiner, mental health personnel, nurse (LPN), nurse (RPN), other child care provider, other DCYF staff, other law enforcement personnel, other medical personnel, other school personnel, other social services personnel, police, pre-school/nursery school, principal, private agency social worker, private physician, psychologist, school nurse, school social worker and teacher.
- Non-professional includes reporter type of babysitter, father/father substitute, friend/neighbor, institutional staff personnel, landlord, mother/mother substitute, not noted by report taker, other reporting source, relative or family, sibling and victim.

Data source: RICHIST; data are current as of 10/1/2023. Page 9 of 44

CPS SCREEN-IN TIME

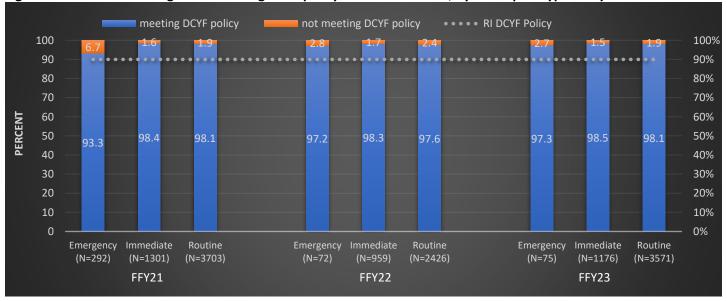

INVESTIGATIONS (MALTREATMENT), continued

Figure 3. Median and Mean screen-in time, by CPS report type and year.

CPS (Child Protection Service) screen-in time reflects the time between when the CPS report was created by the CPS call floor and the time the CPS supervisor reviews and forwards the report to the Child Protective Investigator (CPI). The current DCYF policy requires *emergency reports to be screened within 30 minutes, immediate reports in 120 minutes (2 hours)* and *routine reports in 240 minutes (4 hours)*. In FFY23, there was a decrease in the median screen-in times for emergency, immediate, and routine reports (See Figure 3). In FFY21, FFY22, and FFY23 the percent of investigations meeting the DCYF policy on screen-in time met or exceeded 90% (See Figure 4). Median, the middle most count, references the separation of upper-half, longer time to screen versus lower-half, shorter time to screen. Mean is used to determine outliers of times to screen.

Figure 4. Percent of investigations meeting DCYF policy on screen-in time, by CPS report type and year.

Data notes

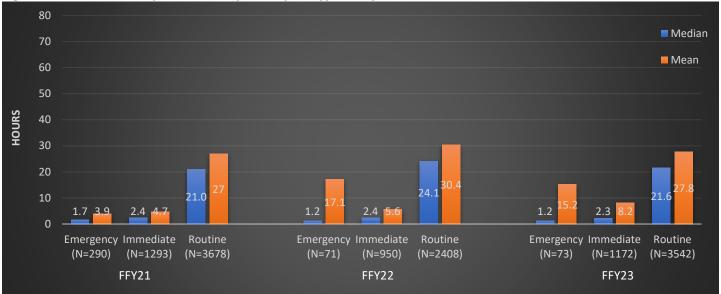

- Data unduplicated by investigation and duplicated by child. Each investigation is counted once, but a child may be counted more than once if had multiple investigations.

Data source: RICHIST; data are current as of 10/1/2023. Page 10 of 44

CPS RESPONSE TIME

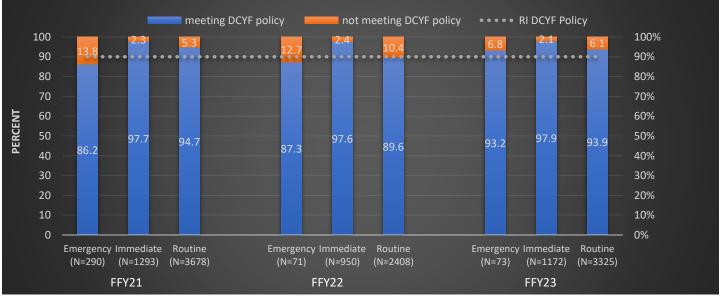

INVESTIGATIONS (MALTREATMENT), continued

Figure 5. Median CPS response time, by CPS report type and year.

CPS (Child Protection Service) response time reflects time between the supervisor acceptance of the report and the first attempted, phone or face to face contact with any person in the investigation case. The current DCYF policy requires *emergency reports to be responded within 4 hours, immediate reports in 12 hours and routine reports in 48 hours.* Adherence to emergency response time was redefined to *within 2 hours* and was implemented on July 1, 2018. The median response times for emergency reports remained the same from FFY22 to FFY23 (See Figure 5). In FFY23, Emergency, Immediate, and Routine investigations met the DCYF policy on CPS response time (See Figure 6). Median, the middle most count, references the separation of upper-half, longer time to response versus lower-half, shorter time to response. Mean is used to determine outliers of times to report response. These CPS response times were revised in policy to align with the Structured Decision-Making Tool in July of 2019.

Figure 6. Percent of investigations meeting DCYF policy on CPS response time, by CPS report type and year.

Data notes:

Data source: RICHIST; data are current as of 10/1/2023. Page 11 of 44

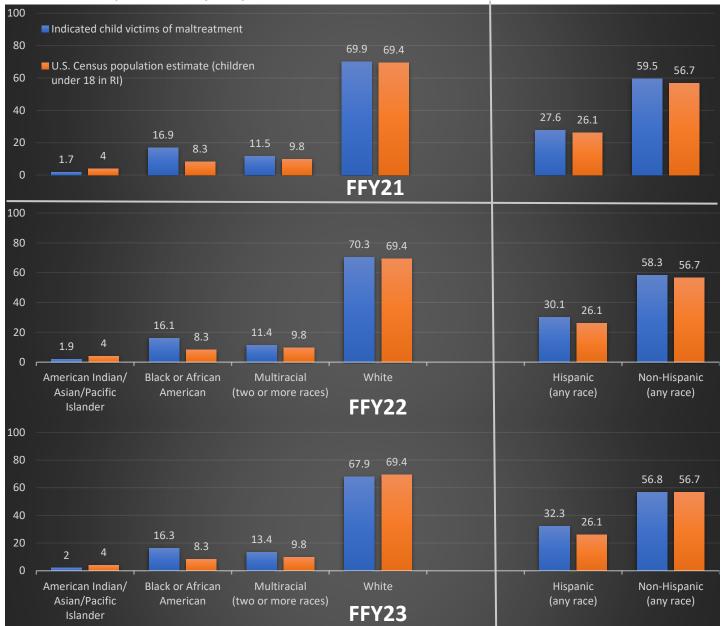

⁻ Data unduplicated by investigation and duplicated by child. Each investigation is counted once, but a child may be counted more than once if had multiple investigations.

⁻ Data missing (9 in FFY21; 18 in FFY22; and 35 in FFY23) response time are excluded.

CPS REPORT DISPROPORTIONALITY

INVESTIGATIONS (MALTREATMENT), continued

Figure 7. Percent of <u>screened-in</u> child victims of maltreatment and population estimate of children under 18 years old in Rhode Island, by race, ethnicity and year.

Over the three years presented, children who are Black or African American, Multiracial, and Hispanic children are disproportionately represented with screened in CPS reports compared to RI 2022 population estimates (See Figure 17).

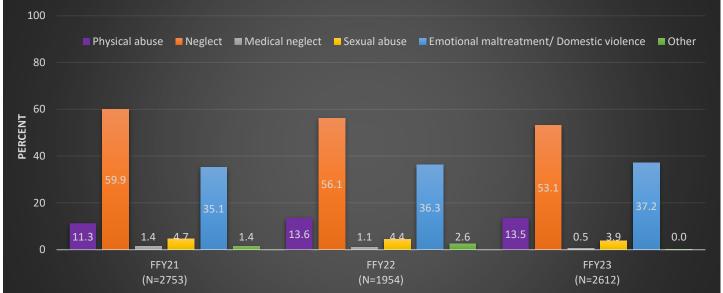

Data source: U.S. Census 2020 population estimate by sex, age, race and Hispanic for children under 18. 50901: CHILDREN CHARACTERISTICS - Census Bureau Table

- Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.
- Children with unknown/missing race and unknown/missing ethnicity are not shown.

WHAT TYPE OF MALTREATMENT OCCURS

INVESTIGATIONS (MALTREATMENT), continued

Maltreatment can range from neglect to medical neglect, emotional abuse, physical abuse, to sexual abuse. In a single investigation a child may be a victim of more than one type of indicated maltreatment. Over the three years, neglect continues to be the most frequent type of indicated maltreatment, remaining consistent across FFY21-FFY23. (See Figure 8). Emotional abuse was the second most frequent type 35% in FFY21, 36% in FFY22, 37% in FFY23. A large proportion of emotional abuse involves domestic violence. The percentages across all maltreatment types remained relatively constant over the three years presented. Congruently, of maltreatment -- as a multi-select variable, 27.9% of individual, indicated investigations had more than 1 type of maltreatment (see appendix Table 2).

Data notes:

- Data shown in investigation level. An investigation may be counted more than once if multiple children indicated in investigation.
- Only the indicated allegations are reflected.
- Percentage may add up to more than 100% because a child may be a victim of multiple maltreatment types.
- NCANDS maltreatment categories may be different from RICHIST categories.
- NCANDS maltreatment type of "other" includes RICHIST allegation types of corporal punishment, inappropriate restraint, other institutional abuse and other institutional neglect under Institutional Abuse & Neglect.

Data source: RICHIST; data are current as of 10/1/2023. Page 13 of 44

INDICATED MALTREATMENT DISPROPORTIONALITY

INVESTIGATIONS (MALTREATMENT), continued

Figure 9. Percent of <u>indicated</u> child victims of maltreatment and population estimate of children under 18 years old in Rhode Island, by race, ethnicity and year.

Over the three years presented, children who are Black or African American, Multiracial, and Hispanic are disproportionately represented with indicated maltreatment compared to RI 2020 population estimates. Similarly, children age 0-9 are disproportionately represented with indicated maltreatment, 68.1% in FFY23 compared to comprising 52.1% of the RI population (See Figure 9).

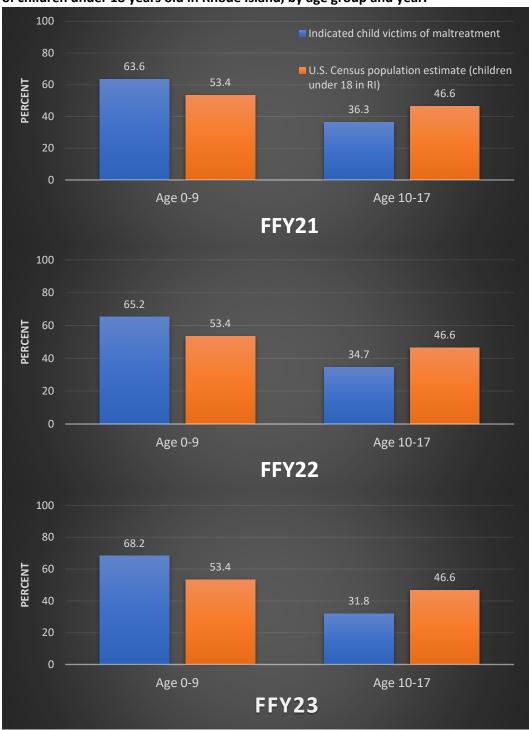

Data source: U.S. Census 2020 population estimate by sex, age, race and Hispanic for children under 18. S0901: CHILDREN CHARACTERISTICS - Census Bureau Table

Data notes:

Data source: RICHIST; data are current as of 10/1/2023. Page 14 of 44

⁻ Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.

Figure 10. Percent of <u>indicated</u> child victims of maltreatment and population estimate of children under 18 years old in Rhode Island, by age group and year.

Data source: U.S. Census 2020 population estimate by sex, age, race and Hispanic for children under 18. Rhode island under 18 town - Census Bureau Tables

⁻ Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.

⁻ Children with unknown/missing race and unknown/missing ethnicity are not shown.

CHILDREN INVESTIGATED INVESTIGATIONS (MALTREATMENT), continued

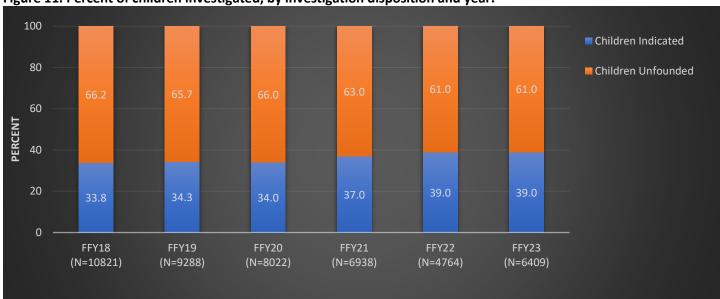

Figure 11. Percent of children investigated, by investigation disposition and year.

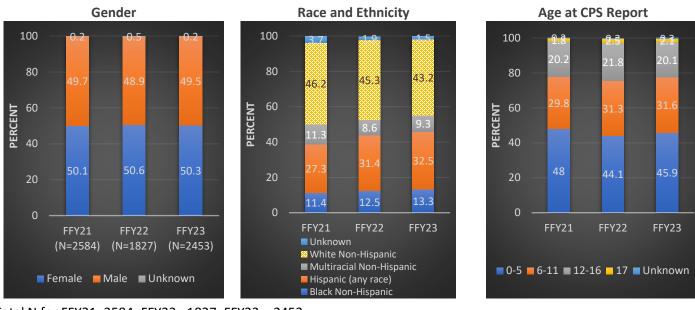

While the total number of children investigated increased from FFY22 to FFY23, the percent of children indicated remained the same from FFY22 to FFY23.

⁻ Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.

CHARACTERISTICS OF CHILDREN

INVESTIGATIONS (MALTREATMENT), continued

Figure 12. Demographics of indicated child victims of maltreatment, by year. (see Table 1 in appendix)

Total N for FFY21=2584; FFY22 =1827; FFY23 = 2453

The data represent an unduplicated number of child victims. If a child was indicated more than once within the 12month period, the child would be counted once. There was relatively no change in the percent of children with indicated maltreatment in gender. There were small increases among Black, Multiracial, and Hispanic group across the three years presented (Figure 12). Approximately 1 in 7 children age 17 and younger who are indicated for maltreatment are under the age of 1 years old (Figure 13).

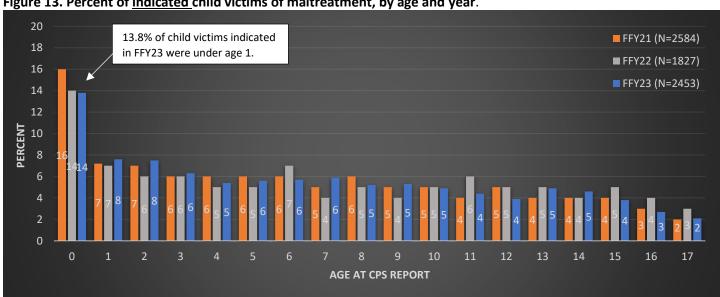

Figure 13. Percent of indicated child victims of maltreatment, by age and year.

Data notes:

- Children with unknown/missing age are not shown.

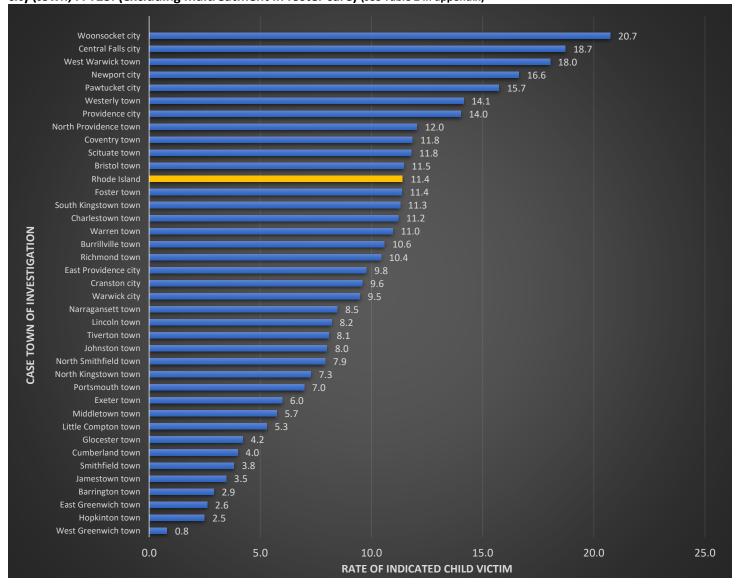

Data source: RICHIST; data are current as of 10/1/2023. Page 17 of 44

⁻ Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.

WHERE IN RHODE ISLAND INVESTIGATIONS (MALTREATMENT), continued

The rate of child maltreatment in RI in FFY23 was 11.4 per 1,000 children (children less than 18 years old). Approximately 11 cities exceeded the RI rate of maltreatment. The rate of child maltreatment increased from FFY22 to FFY23. In FFY22, the rate of child maltreatment in RI was 8.9 per 1,000 children (children less than 18 years old) and approximately 10 cities exceeded the RI rate of maltreatment. In FFY21, the rate of child maltreatment in RI was 11.6 per 1,000 children (children less than 18 years old) and approximately 11 cities exceeded the RI rate of maltreatment.

Figure 14. Rate of <u>indicated child victims per 1,000 children</u> under 18-year-old in Rhode Island, by family city\town, FFY23. (excluding maltreatment in foster care) (see Table 2 in appendix)

Data source: U.S. Census 2020 population estimate for children under 18. Data note:

- Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.
- Excluded child victims with unknown or out of state case address.
- Excluded child victims of maltreatment in foster care.

Data source: RICHIST; data are current as of 10/1/2023. Page 18 of 44

Figure 15. Number of fatalities and near-fatalities of indicated child victims of maltreatment, by calendar year.

Source: DCYF public disclosures, RICHIST, KIDSNET, RIFIS

The Rhode Island Department of Children, Youth, and Families, in partnership with the Rhode Island Department of Health and the Executive of Office Health and Human Services, reviews the fatalities and near-fatalities among indicated child victims of maltreatment as part of fatality prevention efforts. These data measures do not include accidental deaths (e.g. drownings, co-sleeping). In CY 2023, there were twelve near-fatalities from indicated maltreatment and eight fatalities, an increase from CY2022 (Figure 18).

Annual Safety Report

Section 2: Repeat Maltreatment, FFY20-FFY22

Picture source: Florida Coalition Against Domestic Violence (www.fcadv.org)

Data Presented in Section 2:

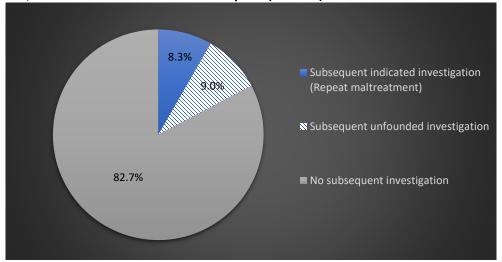

The data presented in Section 2 focus on <u>children under 18</u> years of age who had indicated maltreatment between October 1, 2019 – September 30, 2022 (FFY20-FFY22) and had a subsequent indicated report within 12 months of their initial. A subsequent indicated report which occurred within 14 days of the initial indicated report is not counted as repeat maltreatment, rather it is seen as additional information on the investigation.

The total number of unique child victims presented in this section is slightly different from the number presented in previous section on maltreatment. Maltreatment section is presented by investigation disposition year whereas <u>repeat maltreatment section is presented by investigation report year</u>. There are 1,857 unique child victims who <u>completed investigation</u> in FFY22 as shown in Section 1. There are 2,520 unique child victims who were <u>reported for investigation</u> in FFY23 and completed investigation in either FFY22 or FFY23 as presented in this section. The exclusion criteria and timeframe used to calculate repeat maltreatment are consistent with Children's Bureau reporting.

Note: Though the total number of investigations has increased, the *proportion* of maltreatment has not increased.

Section 2: REPEAT MALTREATMENT

Figure 16. Among <u>indicated</u> child victims reported in FFY22, percent who had <u>subsequent indicated</u> investigation, or repeat maltreatment*, within 12 months of the initial report. (N=2486)

^{*}Repeat maltreatment: report date of the first subsequent indicated investigation falls within 12 months of the initial indicated investigation reported in FFY22.

Table 3. Among <u>indicated</u> child victims, number and percent who had <u>subsequent indicated</u> investigation, or repeat maltreatment*, within 12 months of the initial report, by year.

managed ment of within 12 months of the minda report, by years									
		-Y20 :2633)		Y21 2486)	FFY (N=2				
	N	%	N	%	N	%			
Repeat maltreatment (Subsequent indicated investigation)	224	8.5%	247	9.9%	208	8.3%			
Subsequent unfounded investigation	269	10.2%	226	9.1%	227	9.0%			
No subsequent investigation	2140	81.3%	2013	81.0%	2085	82.7%			

^{*}Repeat maltreatment: report date of the first subsequent indicated investigation falls within 12 months of the initial indicated investigation reported in a given year.

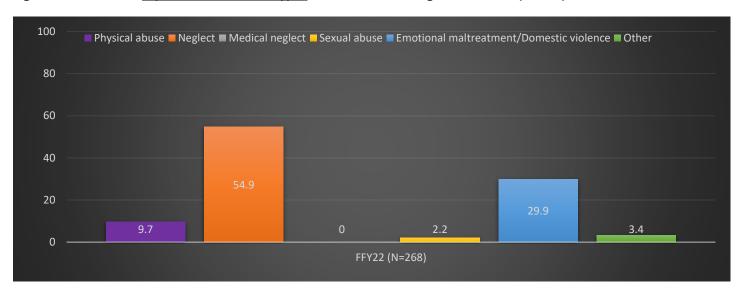

The number and percent of children who experienced repeat maltreatment*, decreased from 247 (9.9%) in FFY21 to 208 children (8.3%) in FFY22. The number and percent of children who experienced a subsequent unfounded investigation remained approximately the same from 226 children (9.1%) in FFY21 to 227 (9.0%) in FFY22.

- Data reflect observed percentage, unadjusted for age. Children's Bureau adjust for age at initial victimization.
- Data unduplicated by keeping the first indicated report in a fiscal year as the initial. If a child had multiple subsequent investigations within 12 months, the first indicated investigation is counted.
- Subsequent investigations reported within 12 months but have not yet completed as of the last day of next fiscal year are not reflected. (example: for the initial investigation reported in FFY22, only the subsequent investigation reported within 12 months and completed in FFY23 are counted as repeat maltreatment)
- Subsequent indicated investigations occurring within 14 days of the initial indicated investigation are not counted as repeat maltreatment.

WHAT TYPE OF MALTREATMENT OCCURS

REPEAT MALTREATMENT, continued

Figure 17. Percent of repeat maltreatment types of indicated investigations, FFY22 (N=268)

In a single investigation a child may be a victim of more than one type of indicated maltreatment. Similar to first indicated maltreatment, neglect continued to be the most frequent type of indicated maltreatment when repeat maltreatment occurred. In repeat maltreatment, emotional abuse continues to be the second most frequent type, 29.9%. A large proportion of emotional abuse involves domestic violence. The percentages across all repeat maltreatment types remained relatively constant compared to initial maltreatment.

Data notes:

- Data shown in investigation level. An investigation may be counted more than once if multiple children indicated in investigation.
- Only the indicated allegations are reflected.
- Percentage may add up to more than 100% because a child may be a victim of multiple maltreatment types.
- NCANDS maltreatment categories may be different from RICHIST categories.
- NCANDS maltreatment type of "other" includes RICHIST allegation types of corporal punishment, inappropriate restraint, other institutional abuse and other institutional neglect under Institutional Abuse & Neglect.

Data source: RICHIST; data are current as of 10/1/2023. Page 22 of 44

REPEAT MALTREATMENT DISPROPORTIONALITY

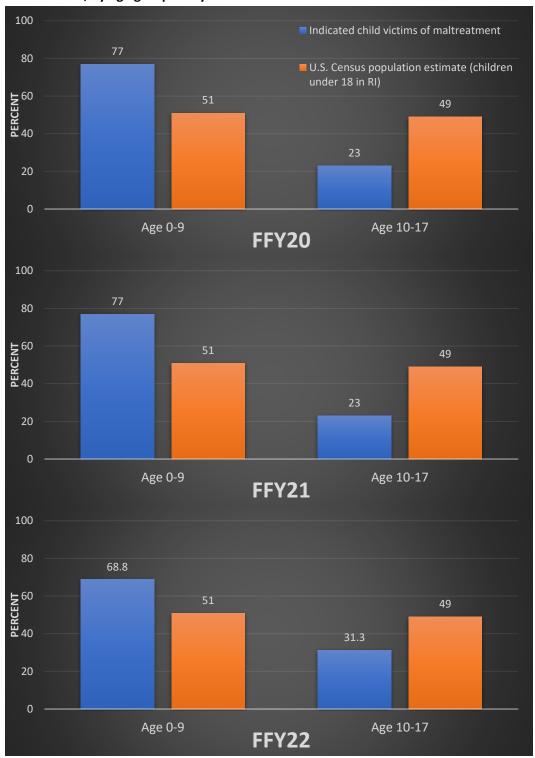

REPEAT MALTREATMENT, continued

Figure 18. Percent of child victims of repeat maltreatment and population estimate of children under 18 years old in Rhode Island, by race, ethnicity, and year.

Figure 17 and 18 compares U.S. Census estimates of children in RI to the proportion of children indicated with repeat maltreatment in FFY20, FFY21, FFY22. The data involving repeat maltreatment reveal a different picture than was observed with indicated maltreatment. In FFY22, there is more disproportionality observed among Hispanic children indicated for **repeat maltreatment** compared to the disproportionality observed **in indicated maltreatment**. Children identified as Multiracial or Black Non-Hispanic were disproportionately represented with repeat maltreatment compared to the proportion of children in RI who are Multiracial or Black Non-Hispanic in all three years presented.

Figure 19. Percent of child victims of repeat maltreatment and population estimate of children under 18 years old in Rhode Island, by age group and year.

Data source: U.S. Census 2020 population estimate by sex, age, race and Hispanic for children under 18. Data notes:

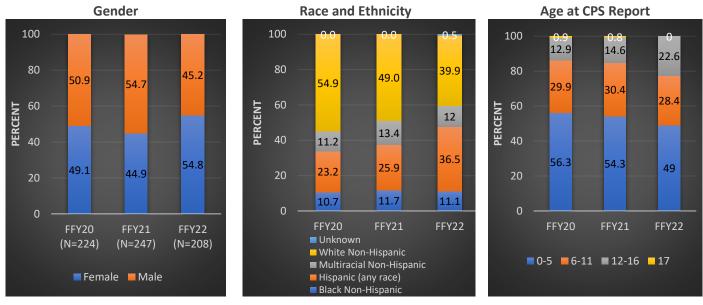

⁻ Data unduplicated by keeping the first indicated report in a fiscal year as the initial. If a child had multiple subsequent investigations within 12 months, the first indicated investigation is counted.

⁻ Children with unknown/missing race and unknown/missing ethnicity are not shown.

CHARACTERISTICS OF CHILDREN

REPEAT MALTREATMENT, continued

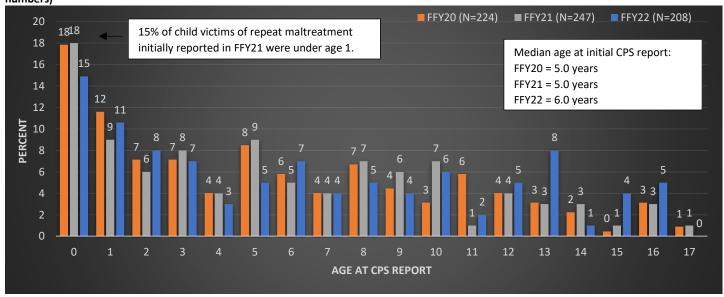

Figure 20. Demographics of child victims of repeat maltreatment, by year.

Total N for FFY20=224; FFY21= 247; FFY22=208

In FFY22, there was an increase in female victims of repeat maltreatment compared FFY21. Among children victims of repeat maltreatment, children between the ages of 0-11 were most frequently victimized. In FFY21 85% of the victims were age 0-11 and in FFY22 77% of the victims were age 0-11 (See Figure 20). Among children of repeat maltreatment, Hispanic ethnicity increased from FFY21 to FFY22. It is important to note this sample size is small and small changes in the number of victims can translate into larger percentage changes. Among child victims of repeat maltreatment age 17 years and younger, approximately 1 in 6 were under the age of 1 year old (See Figure 21).

Figure 21. Percent of child victims of repeat maltreatment, by age and year. (caution in interpreting percentages due to small numbers)

Data notes:

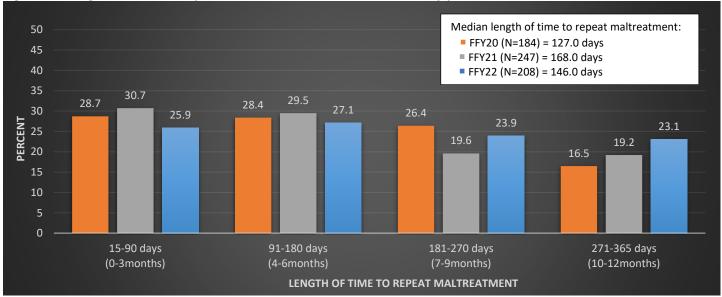

Data source: RICHIST; data are current as of 10/1/2023. Page 25 of 44

⁻ Data unduplicated by keeping the first indicated report in a fiscal year as the initial. If a child had multiple subsequent investigations within 12 months, the first indicated investigation is counted.

LENGTH OF TIME TO REPEAT MALTREATMENT

REPEAT MALTREATMENT, continued

The median length of time to repeat maltreatment decreased from 168 days in FFY21 to 146 days in FFY22. In FFY22, about 55% of children who experienced a repeat maltreatment did so within 6 months of the initial indicated maltreatment. In FFY21, about 53% of children did so within 6 months.

^{*}Length of time: number of days between the report date of first indicated maltreatment in FFY22 and the report date of first subsequent indicated maltreatment within 12 months of the initial.

Data notes:

⁻ Data unduplicated by keeping the first indicated report in a fiscal year as the initial. If a child had multiple subsequent investigations within 12 months, the first indicated investigation is counted.

⁻ Subsequent investigations reported within 12 months but have not yet completed as of the last day of next fiscal year are not reflected. (example: for the initial investigation reported in FFY22, only the subsequent investigation reported within 12 months and completed in FFY23 are counted as repeat maltreatment)

⁻ Subsequent indicated investigations occurring within 14 days of the initial indicated investigation are not counted as repeat maltreatment.

Annual Safety Report

Section 3: Maltreatment in Foster Care (Out-of-Home Placements), FFY21-FFY23

Picture source: Florida Coalition Against Domestic Violence (www.fcadv.org)

Data Presented in Section 3:

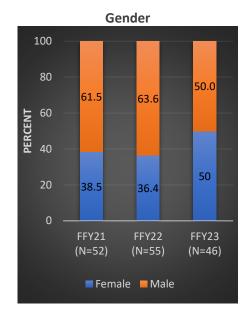

The focus in Section 3 is the occurrence of indicated maltreatment of child victims in foster care in between October 1, 2020 and September 30, 2023 (FFY21-FFY23). NCANDS and AFCARS data are used to indicate child victims of maltreatment in foster care, and RICHIST data extract is used as a supplement to provide details on maltreatment and child victims. Data is *presented by investigation report year*. For example, FFY23 data includes child victims reported in FFY23 and reached disposition in FFY23. Child victims of maltreatment in foster care who were reported in FFY23 but did not complete investigation by the end of FFY23 are not reflected. The definition of foster care is consistent with the federal definition, any out of home placement including foster homes and congregate care. To stay consistent with the Children's Bureau Child and Family Services Review (CFSR) Round 3, the following rules are applied in the analysis: Maltreatment reported within 7 days of removal from home are not counted as maltreatment in foster care. Children age 18 and older at the time of CPS report are excluded. A CPS report within 1 day of the previous report is excluded. Children in Independent Living Arrangement (funded) placements are excluded. Children who were AWOL are excluded.

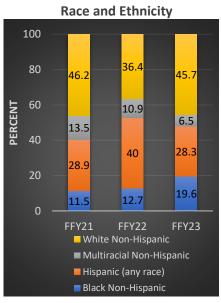

The method in which the Children's Bureau report on maltreatment in foster care changed within the last few of years which impacts both the number of children identified as maltreated in foster care as well as presenting the data as a rate per bed days. In previous methods, the Children's Bureau classified maltreatment in foster care by the perpetrator rather than using a foster care (Federal Definition, all out-of-home placements) status. For example, the perpetrator needed to be a foster care provider to be considered maltreatment in foster care. Presently, the Children's Bureau classifies a child maltreated in foster care who had a report of maltreatment 8 days or after a removal and can include any perpetrators. The purpose for providing this explanation is two-fold. First, the data presented in this report applies the updated Children's Bureau of placement in foster care 8 days or greater subsequent to a report of maltreatment and includes any perpetrator. Secondly, this modified classification may be related to changes in maltreatment in foster care numbers. The most recent Children's Bureau data shows 10.6 victimizations per 100,000 days in care in FFY18, 16.9 victimizations per 100,000 days in care in FFY19, and 13.4 victimizations per 100,000 days in care in FFY20.

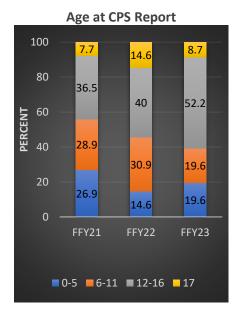

Section 3: MALTREATMENT IN FOSTER CARE

Figure 23. Demographics of indicated child victims of maltreatment in foster care, by year.

Total N for FFY21=52; FFY22=55; FFY23=46

Data notes:

- Data unduplicated by child. A child victim of maltreatment in foster care counted once.

By gender, the percent of female victims increased from FFY22 to FFY23. Among child victims, Black Non-Hispanic and White Non-Hispanic racial group increased from FFY22 to FFY23. Among child victims, the percent of children age 0-5 and 12-16 increased from FFY22 to FFY23, while the percent of children age 6-11 decreased during the same time period (Figure 23).

Table 4. Number of child victims of maltreatment in foster care, by race and ethnicity, by year.

		• •	<u> </u>
	FFY21	FFY22	FFY23
	n=52	n=55	n=46

6-11	15	17	9
12-16	19	22	24
17	4	8	4

Data notes

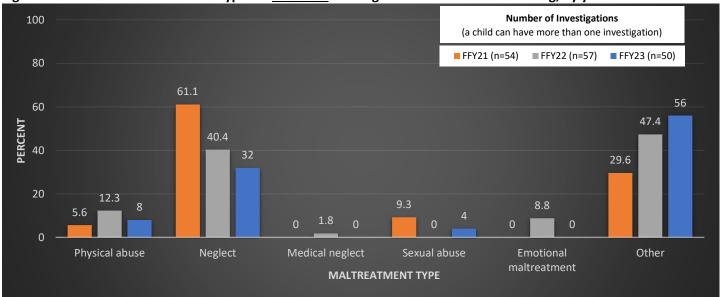

- Data unduplicated by child. A child victim of maltreatment in foster care counted once.

Data source: RICHIST; data are current as of 10/1/2023. Page 28 of 44

MALTREATMENT IN FOSTER CARE BY MALTREATMENT TYPE

MALTREATMENT IN FOSTER CARE, continued

Figure 24. Percent of maltreatment types of indicated investigations in a foster care setting, by year.

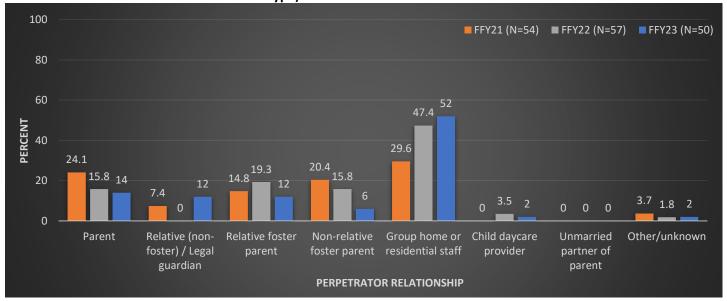

Over the three years presented, the most frequent type of indicated maltreatment in foster care was "other" and "neglect". In FFY22, 40.4% of maltreatment in foster care was "neglect" followed by 47.4% "other", whereas in FFY23, 56% of maltreatment in foster care was "other" followed by 32% "neglect". Comparing FFY22 and FFY23, the percent of indicated investigations of neglect decreased from FFY22 to FFY23 while the percent of indicated investigations of other maltreatment increased during this same time period. NCANDS maltreatment type of "other" includes RICHIST allegation types of corporal punishment, inappropriate restraint, other institutional abuse and other institutional neglect under Institutional Abuse & Neglect.

- Data shown in investigation level. An investigation may be counted more than once if multiple children indicated in investigation.
- Only the indicated allegations are reflected.
- Percentage may add up to more than 100% because a child may be a victim of multiple maltreatment types.
- NCANDS maltreatment categories may be different from RICHIST categories.
- NCANDS maltreatment type of "other" includes RICHIST allegation types of corporal punishment, inappropriate restraint, other institutional abuse and other institutional neglect under Institutional Abuse & Neglect.

MALTREATMENT IN FOSTER CARE BY PERPETRATOR RELATIONSHIPS

MALTREATMENT IN FOSTER CARE, continued

Figure 25. Percent of perpetrator relationship of <u>indicated</u> maltreatment in foster care, by year. (a child may be indicated for more than one maltreatment type)

In FFY23, the most prevalent perpetrator relationships are group home or residential staff (52%) and parent (14%). Non-relative foster parent decreased from 15.8% in FFY22 to 6% in FFY23. In contrast, group home or residential staff perpetrator relationship increased from 47.4% in FFY22 to 52% in FFY23.

- Data shown in investigation level. An investigation may be counted more than once if multiple children indicated in investigation.
- Percentage may add up to more than 100% because a child may have had multiple allegations and/or multiple perpetrators for each allegation.
- Other/unknown includes NCANDS perpetrator relationship of other professionals, friends or neighbors, other and unknown or missing.
- Only the perpetrator relationship to indicated allegations in foster care are reflected.

MALTREATMENT IN FOSTER CARE, continued

Figure 26. The percent of indicated investigations in foster care (out-of-home placement), across placement types, by vear.

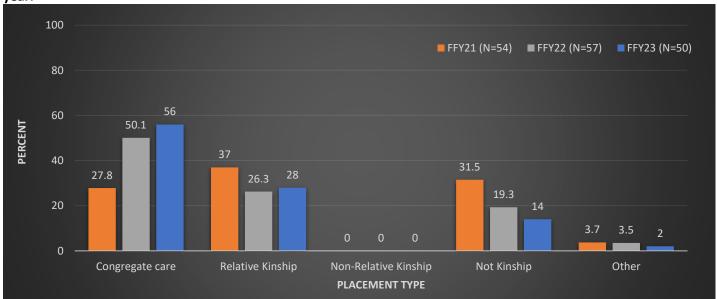

Figure 26 presents the distribution of indicated investigations in foster care across placement types to better understand the distribution and to design tailored interventions to mitigate the risk of maltreatment in foster care.

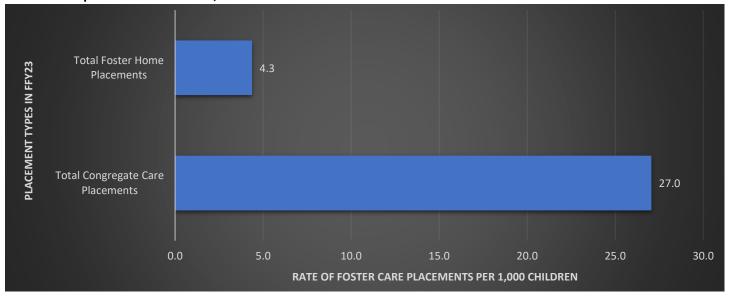

The percent of maltreatment in congregate care increased from FFY22 to FFY23. The percent of maltreatment decreased in not kinship setting from FFY22 to FFY23.

- Data shown in investigation level. An investigation may be counted more than once if multiple children indicated in investigation.
- Congregate care includes placement type of group homes, assessment and stabilization center, residential facility, medical hospital, and substance abuse facility.
- Other includes placement type of absent from care, independent living, psychiatric hospital, and RITS.

MALTREATMENT IN FOSTER CARE PLACEMENT TYPES

MALTREATMENT IN FOSTER CARE, continued

Figure 27. Rate of children <u>indicated</u> maltreatment per 1,000 placements by placement types in foster homes, by all out of home placement at RI DCYF, FFY23

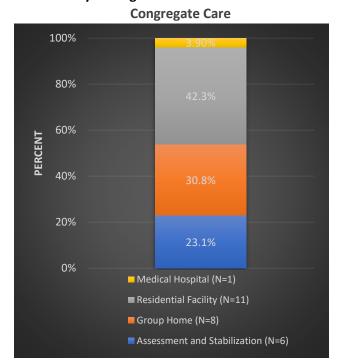

⁻ Data duplicated at the placement level. This is a duplicated counted of children in all placements as a child may be maltreated more than once in a different placement.

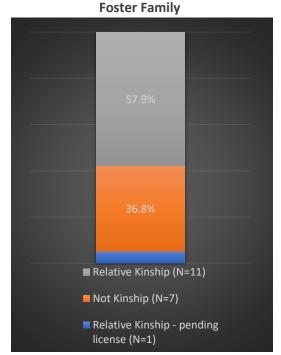

⁻ See to appendix figures 1 and 2 for rates of congregate care and foster family settings of children indicated maltreatment per 1,000 children in out of home placement types.

MALTREATMENT IN FOSTER CARE PLACEMENT TYPES

MALTREATMENT IN FOSTER CARE, continued

Figure 28. Percent of children with <u>indicated</u> maltreatment in foster care, placement types within congregate care and foster family settings at RI DCYF FFY23

Below are the counts of indicated maltreatement by out of home placement type in FFY23. Congregate Care:

- 11 children were in a Residential Facility
- 8 children were in a Group Home
- 6 children were in Assessment and Stabilization
- 1 child was in Medical Hospital

Foster Family:

- 11 children were in a Relative Kinship foster home
- 7 children were in a Not Kinship foster home
- 1 children were in a Relative Kinship pending license foster home

- Data unduplicated at the child level
- Children in "Other" placement types are excluded.
- See to appendix figures 1 and 2 for rates of congregate care and foster family settings of children indicated maltreatment per 1,000 children in out of home placement types

CHILD MALTREATMENT CHARACTERISTICS IN FOSTER CARE PLACEMENT TYPES

MALTREATMENT IN FOSTER CARE, continued

Figure 29. Percent of maltreatment types of <u>indicated</u> maltreatment in foster care, foster family versus congregate care FFY23

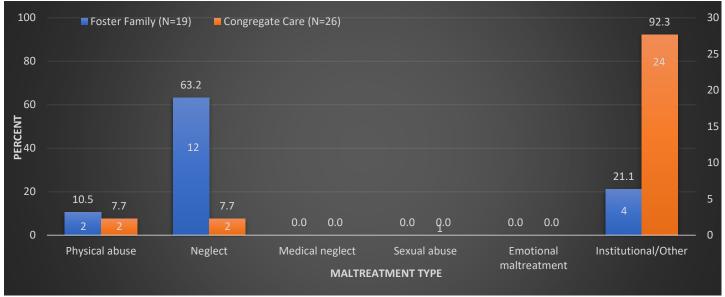

Figure 29 provides the range of maltreatment types. In a single investigation a child may be a victim of more than one type of indicated maltreatment. Neglect is the most frequent type of indicated maltreatment in Foster Families, while institutional/other is most frequent type of indicated maltreatment in Congregate Care. Percentages may add up to more than 100% because a child may be a victim of multiple maltreatment types.

- Data unduplicated at the child level
- Children in "Other" placement types are excluded.
- NCANDS maltreatment type of "other" includes RICHIST allegation types of corporal punishment, inappropriate restraint, other institutional abuse and other institutional neglect under Institutional Abuse & Neglect.

CHILD MALTREATMENT CHARACTERISTICS IN FOSTER CARE PLACEMENT TYPES

(continued)

MALTREATMENT IN FOSTER CARE, continued

Figure 30. Median, Mean age of children with an <u>indicated</u> maltreatment in foster care, family versus congregate care FFY23

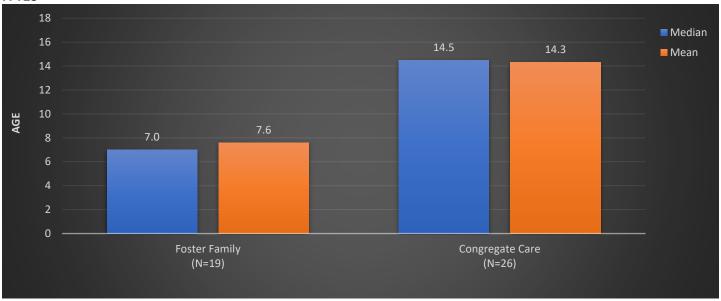

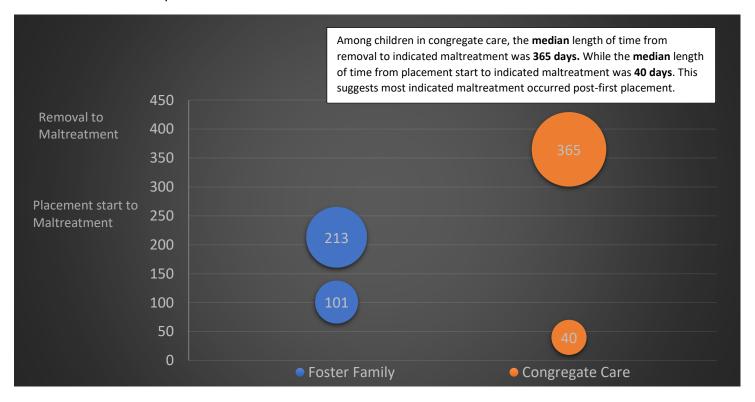

Figure 30 provides the median and mean age of children with an indicated maltreatment in foster families and in congregate care settings. Foster families have a larger proportion of younger children compared to congregate care.

- Data unduplicated at the child level
- Children in "Other" placement types are excluded.

LENGTH OF TIME TO MALTREATMENT BY FOSTER CARE PLACEMENT TYPES MALTREATMENT IN FOSTER CARE, continued

Figure 31. Median length of time (LOT) in days from removal to <u>indicated</u> maltreatment and from placement* start date to <u>indicated</u> maltreatment, foster family versus congregate care FFY23

The focus of this subsection is to: evaluate the differences in length of time to <u>indicated</u> maltreatment in comparing two out of home placement types (i.e., foster families versus congregate care). Removal to maltreatment and placement to maltreatment times were calculated. Maltreatment was defined by CPS report date of an indicated investigation. Placement was defined by where the maltreatment occurred.

- Data unduplicated at the child level
- Children in "Other" placement types are excluded.
- Use of incident date versus report date as the definition of maltreatment date was evaluated decision to define maltreatment by report date
- *Placement where maltreatment occurred

Qualitative Review Findings:

As part of the Department's efforts to better understand both breadth and depth of factors associated with maltreatment in foster care, the Department supplemented the quantitative analysis with a qualitative review of case records where children were indicated for maltreatment. A uniform case record review instrument was developed and two experienced case reviewers were trained on the instrument.

The qualitative review generated opportunities where the Department could focus efforts as part of an overall strategy to mitigate factors associated with maltreatment in foster care.

The main themes emerging from the qualitative case review (specific to congregate care) are:

- Supervision by staff Although no neglect occurred, staffing gaps where the staff youth ratio, or short periods of time where there was a gap in staff supervision was found.
- Restraint use Staff did not consistently apply de-escalation techniques that may reduce the incident where an inappropriate restraint
 was used
- CPS allegations do not match the reported maltreatment type. Maltreatment was not classified as Institutional abuse and neglect when that was the maltreatment type

Recommendations based on the qualitative case record reviews and quantitative analysis:

Recommendations related to Maltreatment in Foster Care

- Complete further data analysis of race and ethnicity of foster families, and correlation between maltreatment data to determine any system trends related to indications. The Licensing Unit will strive to ensure that the race/ethnicity of all foster providers is updated in RICHIST to allow for better tracking and to note any trends, correlations. As of the development of this report, this recommendation has been executed and is monitored on a regular basis and is included in the Licensing race and ethnicity equity plan.
- Revision of regulations for foster families, congregate care, and agency level (last revised, 2017, 2013, and 1987 respectively). The changes will be informed more thoroughly by stakeholder feedback in an effort to ensure more effective provider-level understanding of the legal requirements of program delivery and care. This has been on hold at the request of EOHHS. This will be revisited again in the upcoming year. As of the development of this report, this recommendation has been amended and will move forward with this strategy. Note: The foster care regulations are pending promulgation; Sarah St. Jacques and I met with OMB on 2/29/2024; they see no barriers to move forward with the process. Not sure how you want to reword this.
- As informed by the previous year's Quality Review Findings, Begin "Comprehensive Congregate Care Review" process with a interdisciplinary team from Licensing, Community Services and Behavioral Health, and Contracts & Compliance). This includes follow up efforts with provider agencies to discuss systemic elements that may contribute to maltreatment (specifically related to "institutional" findings as shown in Figure 29). CSBH/Contracts and Licensing meet virtually at least once monthly to ensure we are each aware of any "hot" program issues or concerns. As of the development of this report, this strategy is being met. In addition to virtual meetings; collaborative on-site monitoring visits are being conducted to ensure regulatory compliance; clinical services are being met in accordance with Medicaid requirements and the scope of work outlined in the contracts is being delivered.
- The Department purchased Foster Parent College and such trainings are offered free to all foster families. Such on-line training is available to all kinship, traditional and private agency foster provider. In addition, trainings are also beginning resuming in-person/hybrid approach; many trainings were virtual due to COVID.
- Expand kinship support programming such as peer-to-peer mentor opportunities, support groups, and grant-funded financial support to
 alleviate stressful situations. Division has implemented kinship specific peer to peer mentoring, support groups and facilitates the RI
 kinship Advisory Council. All supports are aimed to enhance system navigation, bridge support gaps, reduce stress and increase retention
 among our kinship family population. As of the development of this report, this recommendation has been executed and continues to be
 executed.
- Federal grant funding has allowed the expansion of mentors to our newly licensed DCYF traditional foster homes. Experienced foster/adoptive parents are able to provide guidance and assistance especially with first placements.
- Explore data related to the Level of Need of children and youth in care compared to the length of time to maltreatment in foster care (Figure 33), and placement type. As of the development of this report, this recommendation has been executed and is included in the Active Contract Management meetings with providers. Additionally, as part of DCYF's ongoing, collaborative congregate care active contract management (ACM) process, DCYF will begin to report on maltreatment rates by congregate care site and engage providers individually and collectively in date-driven conversations on practices and strategies to reduce institutional maltreatment within congregate care.
- Develop additional strategies to ensure that there are not unnecessary barriers in identifying kinship providers. The Divisions of Licensing,
 Family Services and Child Protective Services meet every other week to discuss specific kinship cases in which mitigation is required as to
 ones' criminal history and/or child protective services history. Such allows for otherwise disqualified individuals to come forth to care for
 their kin.
- CPS administrators provide onsite and virtual trainings to administrators, managers and direct care staff at congregate care facilities on maltreatment reporting laws and navigating child protective services and CSEC (Commercial Exploitation of Children).
- As part of Family First Prevention Service Act all program staff and youth will be provided enhanced training on CSEC.
- Increased monitoring of in-state congregate care facilities by the Division of Licensing. Increased to at least quarterly visits versus once yearly as required.

Table 1. Demographics of indicated child victims of maltreatment, by year.

Data source: U.S. Census 2020 population estimate for children under 18.

Data note

- Data unduplicated by child. If a child had multiple investigations in a fiscal year, perhaps one indicated and one unfounded, the child is counted once as indicated child victim.
- Excluded child victims with unknown or out of state case address.
- Excluded child victims of maltreatment in foster care.
