This report, Community Based Services (July 1, 2014 – November 30, 2015 Entry Cohort), was produced by the Rhode Island Department of Children, Youth and Families' Data and Evaluation Unit. If you have questions or require additional information about this report, please contact Colleen Caron, RI DCYF Data and Evaluation Unit Director and Epidemiologist, at Colleen.Caron@dcyf.ri.gov, or Kyeonghee Kim, RI DCYF epidemiologist, at Kyeonghee.Kim@dcyf.ri.gov.

RI Department of Children, Youth and Families (RI DCYF) Community Based Services

July 1, 2014 – November 30, 2015 Entry Cohort (July1, 2012 – June 30, 2014 Entry Cohort for Visitation Program)

Introduction

The Rhode Island Department of Children, Youth and Families (RI DCYF) in collaboration with community providers offer various community based services as part of early efforts to preserve families caring for their children and youth as well as to promote their overall well-being. The primary purpose of this report is to provide a preliminary surveillance on the profile of children, youth and families receiving *RI DCYF* funded community based services during July 1, 2014 through June 30, 2015. Children, youth and families may have received additional services paid through other funding sources (i.e. managed Medicaid, Medicaid, private insurance) not captured in this report during this same time period. This information can assist RI's Child Welfare System of Care in service array planning to meet the needs of children and families. Most of the community based services funded by RI DCYF were administered in collaboration with and as part of their SOC FCN implemented in State Fiscal Year 2013 (FY13). The data presented in this report are limited to DCYF funded services only. Children and caregivers who may have received other services funded through alternate means are not included in this report.

Between July 1, 2014 and November 30, 2015, 1521 youth and 260 caregivers (a duplicated count by service type) entered at least one type of 16 different DCYF funded community based services, excluding Visitation Center which is presented in its own separate section. The end date of November 2015, rather than a complete fiscal year, was selected to allow for a 6-month follow up for all children and families. March 2016 began a new process for recording community based programs and for that reason and a slight lag in the data management process, November 30, 2015 was selected as an end date. Entry into one of the community based programs is defined as no previous enrollment in that particular program for at least 3 months or greater. This parameter was selected due to the nature in which the data is collected, fiscal data submission processes and could potentially yield limitations in the entry definition. As the primary purpose of this preliminary surveillance report is for community based service array utilization during July 1, 2014 through June 30, 2015 and initial data on selected outcomes, this report does not include dosage analysis on outcomes. Fifteen youth who started a service while in RITS or psychiatric hospital and 4 youth who received Family Therapy, Restorative Justice or Enrichment Program are excluded from this report due to small numbers.

Children and youth in-home - selected outcomes

This report mainly focuses on 965 entry cohort of children and youth between ages 0 and 21 who are involved with DCYF's child welfare, behavioral health and/or juvenile justice and started at least one type of DCYF funded community based services from an in-home placement between July 1, 2014 and November 30, 2015. From a surveillance (descriptive) framework, these youth were then followed for 6 months from the start of their services to see if they experienced any of these selected outcomes consistent with the program objectives within the given period: 1) removals from home, 2) Child Protective Services (CPS) investigation, 3) indication of maltreatment, 4) stay at Rhode Island Training School (RITS) and/or 5) adjudication in the juvenile justice system.

Children and youth out-of-home - selected outcomes

The report also includes an analysis on 556 entry cohort of children and youth between age 0 and 21 who are involved with DCYF's child welfare, behavioral health and/or juvenile justice and started at least one type of DCYF funded community based services from an out-of-home placement between July 1, 2014 and November 30, 2015. From a surveillance (descriptive) framework, these youth were then followed for 6 months from the start of their services to see if they discharged from all out-of-home placements.

<u>Children and youth out-of-home receiving Visitation Center – selected outcomes</u>

There are 131 entry cohort of children who started Visitation Center service in FY13-FY14. They are analyzed separately as Visitation Center specifically serves younger children already in out-of-home placements to support successful reunification with their parents. Children in Visitation Center service were followed for 12 months from the service start date to see if they reunified with their parents after receiving the service. Then, among those who reunified within 12 months of starting visitation service were followed for another 6 months from the date of their reunification to see if they experienced any of these selected outcomes within the given period: 1) subsequent removals from home, 2) Child Protective Services (CPS) investigation, 3) indication of maltreatment, 4) stay at Rhode Island Training School (RITS) and/or 5) adjudication.

Children, youth and caregivers receiving selected RI DCYF funded community based services

Between July 1, 2014 and November 30, 2015, there was a total of 1,781 children, youth and caregivers who received RI DCYF funded community based services through RI DCYF community providers and partners. The aim of these services is to preserve families, maintain safety and promote overall family well-being. The largest proportion of those receiving services were with youth age 18 and younger, 1,471 youth, followed by caregivers age 18 and older, 260 caregivers, and then youth age 18-21, 50 youth (See Table 1). Table 1 excludes children and youth who received Visitation Center as this program specifically serves younger children already in out-of-home placements to support successful reunification with their parents. Please see page 25 of this report for details on children in Visitation Center.

Table 1. Number of youth and caregivers who started at least one type of community based services through RI DCYF between 7/1/14-11/30/15*.

	Youth (under 18)	Youth (18 – 21)	Caregiver (18 and older)	Total
Number of youth and caregivers who received at least one type of community based service paid for by DCYF (duplicated)	1,471	50	260	1,781

^{*} Youth who started Visitation program are excluded from the table. Children receiving Visitation Center are analyzed separately as this program specifically serves younger children already in out-of-home placements to support successful reunification with their parents (see page 25).

- A youth may be counted in more than one category if age at the start of each community based service falls under multiple categories.
- Data duplicated by service type. If a youth received multiple services between 7/1/14-11/30/15, a youth is counted once for each service. If a youth received a same service with more than 90 days gap between the sessions, it is counted as separate service episodes and a youth is counted more than once.
- 15 youth who started a service while in RITS or psychiatric hospital are excluded from the report.
- 4 youth who started Family Therapy, Restorative Justice or Enrichment programs are excluded from the report due to small number.

Picture Source: Child & Family http://childandfamilyri.com/

Children, youth and caregivers receiving selected RI DCYF funded community based services

Among the DCYF funded community based services, the majority of children and youth who started a service between July 1, 2014 and November 30, 2015 (excludes caregivers) were primarily serviced by 4 RI DCYF funded services, Enhanced Family Support Services (EFSS), Preserving Family Networks (PFN), Multisystemic Therapy (MST) and Trauma Systems Therapy (TST) (see Figure 1). As services are often tailored to different age groups, the utilization of services is stratified by age revealing different utilization patterns. Figure 2 shows the percent of youth among age categories and their most frequently used service type. Among youth, the largest proportion of youth in each age group, 29.2% of youth age 0-10, 25.0% of youth age 11-17 and 36.0% of youth age 18-21, received EFSS. Among caregivers age 18 and older, the largest proportion, 54.6%, received mental health counseling, followed by Parent Aide/Education, 23.1%, substance abuse counseling, 15.8%, and sexual abuse counseling, 3.1%.

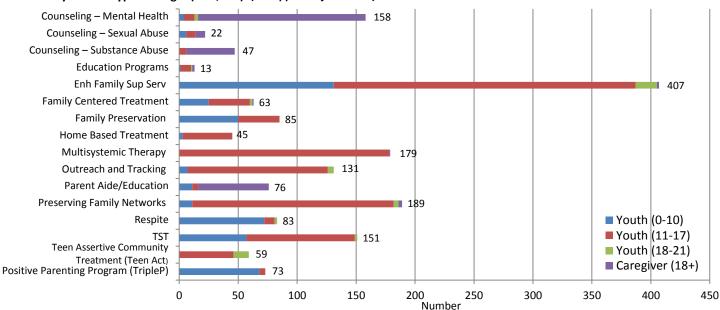

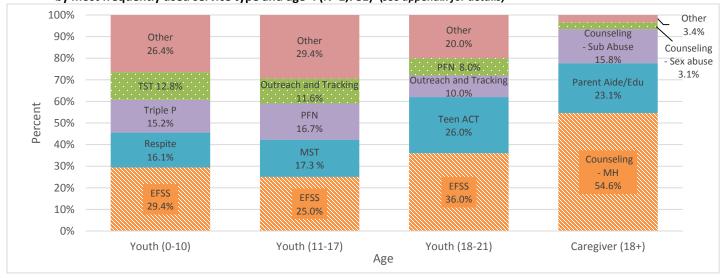

Figure 2. Percent of youth and caregivers who started at least one type of community based services between 7/1/14-11/30/15, by most frequently used service type and age*. (N=1,781) (see appendix for details)

^{*} Youth who started Visitation program are excluded from the table. Children receiving Visitation Center are analyzed separately as this program specifically serves younger children already in out-of-home placements to support successful reunification with their parents (see page 25).

NOTE: TST includes both community based and residential services. TST community based indicates service began in-home. TST residential indicates service began out-of-home but a child could have continued into community.

Community based services: Placement types and population characteristics

Table 2 provides data on children and youth and whether they resided in-home or in an out-of-home placement when they started the community based services. As the purpose of this surveillance report focuses on children and youth in their homes receiving community based services, the majority of children and youth, 63.5%, were in home when they began the community based service. This purpose of focusing on in-home holds true except for the additional focus on the Visitation program primarily aimed at young children who are in a foster family setting receiving visitation support with their primary caregivers (see Visitation Center, page 25).

Table 2. Number and percent of youth who started at least one type of community based service between 7/1/14-11/30/15, by placement type at the start of service and age*. (N=1,521)

			Aį	ge			т.	a a l		
Placement	0 -	10	11 -	- 17	18 -	- 21	10	Total		
	N	%	N	%	N	%	N	%		
Started service in-home	182	40.8%	759	74.0%	24	48.0%	965	63.5%		
Started service out-of-home	264	59.2%	266	26.0%	26	52.0%	556	36.5%		
Total	446 100.09		1025	100.0%	50	100.0%	1521	100.0%		

^{*} Youth who started Visitation program are excluded from the table. They are analyzed separately as this program specifically serves younger children already in out-of-home placements to support successful reunification with their parents (see page 25).

⁻ In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.

⁻ Out-of-home placements defined in this report include AWOL, group home, independent living (funded or unfunded), relative foster home, relative foster home – pending license, non-relative foster home, private agency foster care, pre-adoptive home, residential facility, respite care, shelter care, substance abuse facility, and other. This is not exclusively child welfare placement.

Selected 6-month outcomes of children and youth who started a community based service from <u>IN-HOME</u> between 7/1/14-11/30/15

Among the 965 children and youth who started a community based service between July 1, 2014 and November 30, 2015 while inhome, 56.3% were male, 81.2% were between the age of 11 and 21, and 46.8% were White Non-Hispanic, 12.3% were Black Non-Hispanic, 9.8% were Multiracial/other Non-Hispanic and 30.6% were Hispanic (any race) (see Figure 3). Figure 4 presents data on the demographics of the caregiver with 57.3% female, 87.3% parent, and 59.2% White Non-Hispanic, 14.2% Black Non-Hispanic, 3.8% Multiracial/other Non-Hispanic and 18.8% Hispanic (any race).

Figure 3. Demographics of youth who started community based services from IN-HOME between 7/1/14-11/30/15. (N=965)

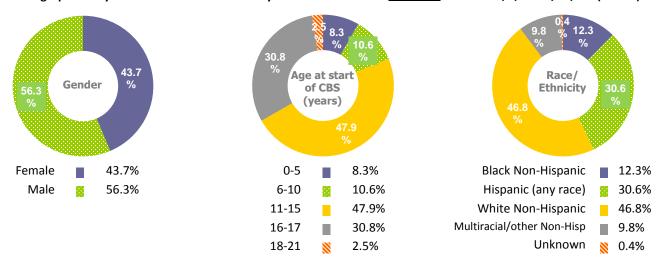

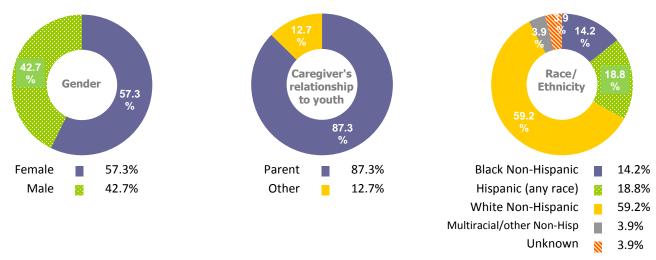

Figure 4. Demographics of caregivers who started community based services between 7/1/14-11/30/15. (N=260)

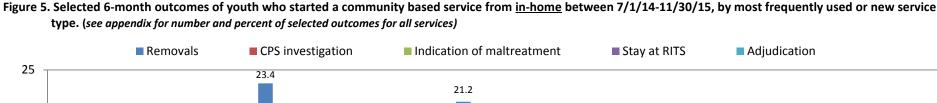

⁻ In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.

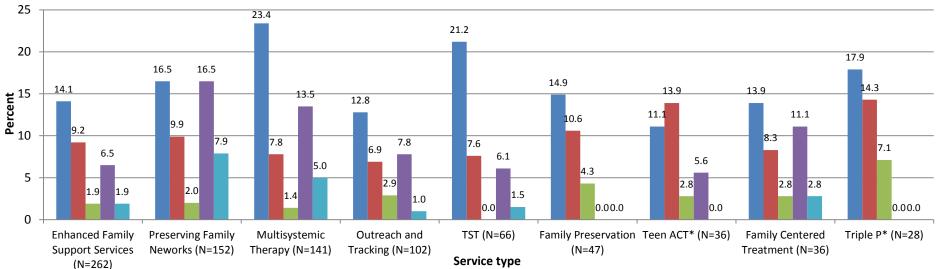

⁻ Parent group includes adoptive parent, biological parent and step parent. Other includes foster parent, legal guardian, maternal grandparent, non-relative, other relative, parent's paramour, paternal aunt, sibling's father and step sibling grandparent.

Selected 6-month outcomes of children and youth who started a community based service from IN-HOME between 7/1/14-11/30/15

Figure 5 provides data on children and youth who started a DCYF funded community based service from in-home between July 1, 2014 and November 30, 2015 and experienced at least one of the 5 selected outcomes within 6 months of starting a service. Depending on the length of time a youth received a service, a youth may or may not have been receiving the service at the time of experiencing the outcome. This information can serve as an initial starting point for each respective service to assess these selected outcomes over time and should not be viewed as a comparison across these programs due to differences in populations served by the respective services (i.e. differences in age groups, family and presenting concerns, severity of presenting concerns etc.)

The most frequent outcome amongst all community based services totaled (all 16 services listed in Appendix Table 2) was "Removals" followed by "CPS investigations", "Stay at Rhode Island Training School (RITS)", "Adjudication" and "Indication of maltreatment". For each of the individual most frequent or new services, "Removals" was the most frequently experienced outcome for 8 out of the 9 services, followed by "CPS investigation" for 5 out of the 9 services and "Stay at RITS" for 4 out of the 9 services (see Figure 5).

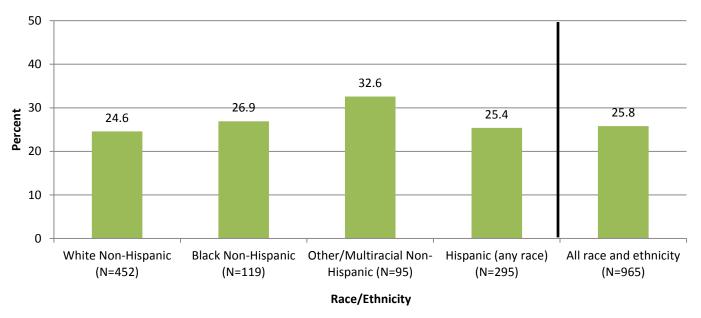

^{*}Triple P: Positive Parenting Program, Teen Act: Teen Assertive Community Treatment NOTES:

- Six month follow-up period begins on the service start date.
- A youth may be counted in more than one outcome category, if a youth experienced multiple outcomes within the 12 month period.
- In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.
- Depending on the length of time a youth received a service, a youth may or may not have been receiving the service at the time of experiencing the outcome. Youth may have ended the service any time before or after experiencing a selected outcome.
- TST includes both community based and residential services. TST community based indicates service began in-home. TST residential indicates service began out-of-home but a child could have continued into community.

Disproportionality in selected 6-month outcomes of children and youth who started a community based service from *IN-HOME* between 7/1/14-11/30/15

Among all youth in this sample, similar percentages across the racial and ethnic categories experienced at least one of the selected 5 outcomes. The data suggests an absence of disproportionality by race or ethnicity in experiencing at least one of the 5 selected outcomes (see Figure 7). There may be disproportionality for any of the 5 individual outcomes; however, due to small numbers, this analysis was unable to be conducted at this time. A future report will combine multiple years that would increase the sample to provide analysis on individual outcomes across racial and ethnic groups. Some of the racial groups were combined due to small numbers.

Figure 6. Disproportionality in experiencing any one of selected 6-month outcomes among youth who started a community based service from <u>in-home</u> between 7/1/14-11/30/15, by race and ethnicity.

■ any one of selected outcomes (Removal, CPS investigation, maltreatment, Stay at RITS, and/or Adjudication)

Note:

- Four youth with unknown race and ethnicity are excluded from the graph.
- Six month follow-up period begins on the service start date.
- In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.
- Depending on the length of time a youth received a service, a youth may or may not have been receiving the service at the time of experiencing the outcome. Youth may have ended the service any time before or after experiencing a selected outcome.

Survival analysis on selected 6-month outcomes of children and youth who started a community based service from <u>IN-HOME</u> between 7/1/14-11/30/15

Survival Analysis: Time to Event

Figures 7-11 presents results from the survival analysis on the 965 children and youth who started a child/youth centric community based service while in-home between 7/1/14 and 11/30/15. These programs are listed in Figure 1 on page 3, and Table 2 in the appendix. The survival analysis combines all child/youth centric community based services to provide a system level analysis on the 5 selected outcomes: 1) time to removal; 2) time to CPS investigation. 3) time to CPS indicated maltreatment; 4) time to adjudication; and 5) time to RI training school (RITS) stay. As indicated, children began one of the community based programs while in-home and were followed for 6-months. On a system level, 6 months post community based program start:

- 84% of children remained in home (Figure 7)
- 91% of children did not have a CPS investigation (Figure 8)
- 98% of children did not have an indicated maltreatment (figure 9)
- 97% of youth did not have an adjudication (Figure 10)
- 92% did not enter the RI Training School (Figure 11)

Figure 8. Survival Curve: Ninety-one percent of children and youth who began a community based program while in home did not have a CPS investigation 6 months post program start (N=965)

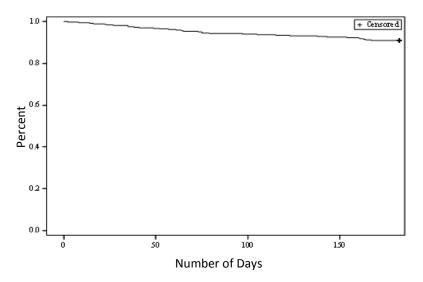

Figure 7. Survival Curve: Eighty-four percent of children and youth who began a community based program while in-home remained in home 6 months post program start (N=965)

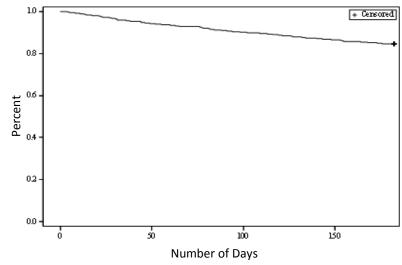

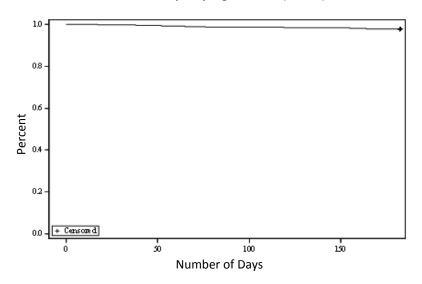

Figure 9. Survival Curve: Ninety-eight percent of children and youth who began a community based program while in home did not have an indicated maltreatment 6 months post program start (N=965)

Survival analysis on selected 6-month outcomes of children and youth who started a community based service from <u>IN-HOME</u> between 7/1/14-11/30/15

Figure 10. Survival Curve: Ninety-seven percent of children and youth who began a community based program while in home did not have an adjudication 6 months post program start (N=965)

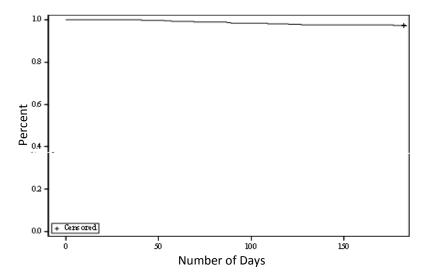

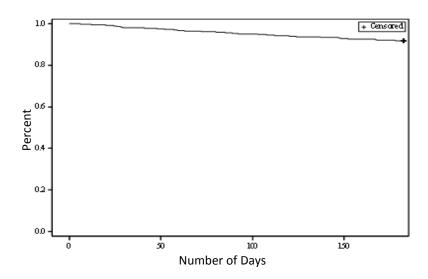

Figure 11. Survival Curve: Ninety-two percent of youth who began a community based program while in-home remained in home and did not enter the RI Training School 6 months post program start (N=965)

Selected 6-month outcomes of children and youth who started a community based service from <u>OUT-OF-</u> HOME between 7/1/14-11/30/15

Among the 556 children and youth who started a community based service between July 1, 2014 and November 30, 2015 while out-of-home, 55.8% were male, 77.2% were between the age of 0 and 15, and 41.4% were White Non-Hispanic (see Figure 12). Children and youth may begin a community based service while out-of-home (in RI DCYF placement) for various reasons of which include being placed in a foster family setting and receiving services or placed in a congregate care setting to assist with the child, youth and family transition from placement. Among all children and youth who started a service out-of-home, 37.6% discharged from all out-of-home placements and median length of time from start of a service to discharge was 50 days (see Appendix Table 4). Percent of children and youth discharged within 6 months of starting a service for most frequent or new services is reflected in Figure 13.

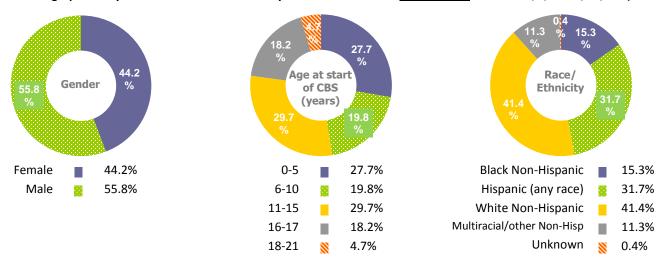

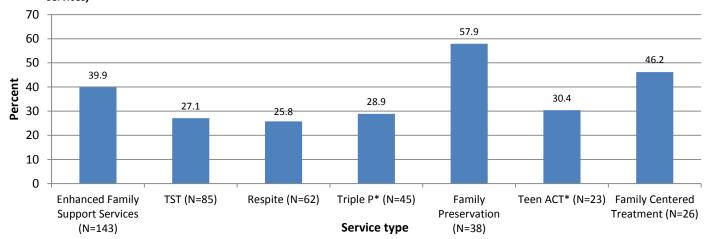

Figure 13. Percent of youth discharged within 6 months of starting a community based service <u>out-of-home</u> between 7/1/14-11/30/15, by most frequently used or new service type. (see appendix for number, percent and median length of time for all services)

^{*}Triple P: Positive Parenting Program, Teen Act: Teen Assertive Community Treatment NOTES:

⁻ Six month follow-up period begins on the service start date.

⁻ Out-of-home placements defined in this report include AWOL, group home, independent living (funded or unfunded), relative foster home, relative foster home – pending license, non-relative foster home, private agency foster care, pre-adoptive home, residential facility, respite care, shelter care, substance abuse facility, and other. This is not exclusively child welfare placement.

⁻ Depending on the length of time a youth received a service, a youth may or may not have been receiving the service at the time of discharge. Youth may have ended the service any time before or after discharging from all out-of-home placements.

⁻ TST includes both community based and residential services. TST community based indicates service began in-home. TST residential indicates service began out-of-home but a child could have continued into community.

Enhanced Family Support Services (EFSS)

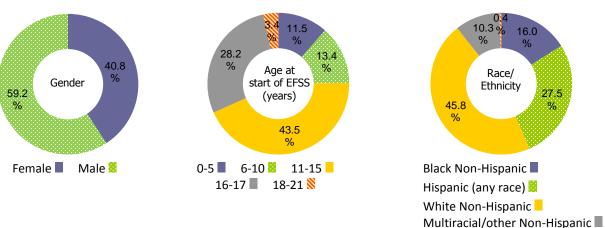

Table 1. Number and percent of youth and caregivers who started EFSS between 7/1/14-11/30/15, by age.

- Six month follow-up period begins on the service start date.
- A youth may be counted in more than one outcome category, if a youth experienced multiple outcomes within the 6 month period.
- Median length of time (in days) between the start of PFN and the selected outcome.
- Depending on the length of time a youth received PFN, a youth may or may not have been receiving PFN at the time of experiencing the outcome. Youth may have ended PFN any time before or after experiencing a selected outcome.
- In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.

Preserving Family Networks (PFN)

Table 4. Six-month follow-up of youth who started PFN from <u>out-of-home</u> between 7/1/14-11/30/15, by age and selected outcomes. (N=34)

Age	Total number	Discharge from all out-of- home placements				
group	of youth	N	% (row)	Median days

NOTES:

- Six month follow-up period begins on the service start date.
- A youth may be counted in more than one outcome category, if a youth experienced multiple outcomes within the 6 month period.
- Median length of time (in days) between the start of FCT and the selected outcome.
- Depending on the length of time a youth received FCT, a youth may or may not have been receiving FCT at the time of experiencing the outcome. Youth may have ended FCT any time before or after experiencing a selected outcome.
- In-home placements defined in this report include living arrangement of stay with friend, guardian, married parents, relatives, separated couple, single female parent, single male parent, subsidized adoption, and unmarried couple. This is not exclusively child welfare placement.

RI Department of Children, Youth and Families (RI DCYF) Community Based Services – Visitation Center July 1, 2012 – June 30, 2014 (FY13-FY14)

This page reflects children who started Visitation Center (VC) in FY13-FY14. The children who started Visitation Center from an out-of-home placement were followed for a year from the service start to see if they reunified with parents or achieved other types of permanency after receiving the service. Then, those who reunified with parents were followed for another six months upon reunification to home to see if they experienced any of these selected outcomes after returning home: 1) subsequent removal from home, 2) CPS investigation, 3) indication of maltreatment, 4) stay at RITS and/or 5) adjudication.

Table 1. Number and percent of youth who started Visitation Center through RI DCYF in FY13-FY14, by placement type at the start of the service and age. (N=131)
