Rhode Island Department of Children, Youth and Families (RI DCYF)
Permanency Report: Entry Cohort of Children in Foster Care
FY14 - FY18
(July 1, 2013 – June 30, 2018)

Introduction

The Rhode Island Department of Children, Youth & Families is pleased to share with you *The Rhode Island Department of Children, Youth and Families Permanency Report: Entry Cohort of Children in Foster Care FY14-FY18*. This report provides summary information on children, youth and families who enter out-of-home placement. A primary aim of the report is to provide data and information to Rhode Island agencies and communities to guide their efforts in supporting the well-being of children, families, and communities in Rhode Island.

The Department's approach in this report was to use an entry cohort in each of the state fiscal years, FY14-FY18. The data presented in this report is based on these fiscal year entry cohorts. The FY14-FY18 entry cohorts include only children who were removed from their homes during each of these fiscal years and entered into an out-of-home placement. *It is important to note* that during those same time periods there were children and youth who were in out-of-home placements however, they entered during a previous fiscal year. This report presents data only on the entry cohorts for the FY14-FY18 fiscal years identified and does not include data on children and youth who are not part of the respective fiscal year cohorts. Another note regarding the data analysis, statistical analysis for significant differences was conducted only in the sections on disproportionality.

Why an entry cohort?

The advantage of an entry cohort over other approaches such as an exit cohort or point-in-time, is in its ability to better assess the impacts of system interventions and link observed impacts to the interventions. Relatedly, entry cohorts provide an accurate picture of patterns of change over time making it easier to understand policy or program intended effects compared to an exit cohort or point in time data. Further, analyzing entry cohort outcomes is consistent with the Children's Bureau National Child Welfare Outcomes.

Highlights on Entry Cohorts of Children Age 0-17 from FY14 to FY18

- From FY16 to FY18, the removal rate increased from 4.8 per 1,000 children to 6.7 per 1,000 children.
- From FY16 to FY18, the number of children age 0-9 entering out-of-home placement has increased.
- Among the 1381 children who entered RI DCYF out-of-home placement in FY18 (FY18 entry cohort), the greatest proportion of children removed occurred among children age 0-5 years old, 47.4%, followed by the 12-16 age group, 25.1%.
- The median age of children entering into an out-of-home placement in FY18 was 6 years old. However, the median age of children who are Black or African American and children who are Hispanic reduced noticeably from FY17 to FY18.
- Overrepresentation\Underrepresentation: *Children age 10-17* who are Black or African American, or Multiracial or Hispanic were overrepresented in entering into an out-of-home placement compared to their RI census population. The magnitude of these racial and ethnic differences is not observed in the 0-9 age group.
 - Of all children between age 10 and 17 in Rhode Island, 10.7% are Black or African American. Of all children between age 10 and 17 entering out-of-home placement in FY18, 20.2% are Black or African American.
 - Of all children between age 10 and 17 in Rhode Island, 5.4% are Multiracial. Of all children between age 10 and 17 entering out-of-home placement in FY18, 9.7% are Multiracial.
 - Of all children between age 10 and 17 in Rhode Island, 23.0% are Hispanic. Of all children between age 10 and 17 entering out-of-home placement in FY18, 31.6% are Hispanic.
 - Of all children between age 10 and 17 in Rhode Island, 78.5% are White. Of all children between age 10 and 17 entering out-of-home placement in FY18, 66.6% are White.
- In FY18, neglect is the most common removal reason for children age 0-11, 68.4%. Child behavior is the most common removal reason for children age 12 and older, 51.2%. Both age groups had caretaker inability to cope as a common removal reason during FY18.
- Neglect as a removal reason increased from FY16 to FY18 among both 0-11 and 12 and older age groups
- Child behavior as a removal reason decreased in FY18 from FY16 among children age 12 and older
- Among children entering an out-of-home placement in FY18, children age 0-11 are most frequently placed in a foster family setting for their first placement while children age 12 and older are most frequently placed in congregate care settings.
- The percent of children age 12 and older whose first placement was in a family setting increased in FY18. Among the children age 12 and older whose first placement is a foster family, a greater percentage are in a relative kinship family placement.
- In FY17, the percent of children entering into an out-of-home placement and achieving permanency within 12 months of entry was 35% The most frequent permanency type achieved for all age groups was reunification (84% reunification) except for children age 17 and older. For children age 17 and older, 55.1% were discharged without permanency.
- In general, the median length of time in all placements combined for children achieving permanency within 12 months of entry has increased from FY15-FY18.

Highlights on Entry Cohorts of Children Age 0-17 from FY14 to FY18

- Among the FY16 entry cohort (**excluding children who discharged within 12 months of entry**), the percent of children achieving permanency within 13-24 months of entry was 48%.
- The percent of children re-entering out-of-home placement in FY16-FY18 within 12 months of a discharge to reunification, guardianship, or living with relatives in FY16-FY18 was 19.7%.
- Among the FY16 entry cohort who re-entered an out-of-home placement in FY16-FY18 within 12 months of a discharge to reunification, guardianship, or living with relatives:
 - Trajectory of family foster care placement: The majority of children re-entering within 12 months of previous discharge into a first placement of foster family were previously discharged from a foster family placement.
 - Trajectory of congregate care: The majority of children re-entering within 12 months of previous discharge into a first placement of congregate care, were previously discharged from a congregate care placement.

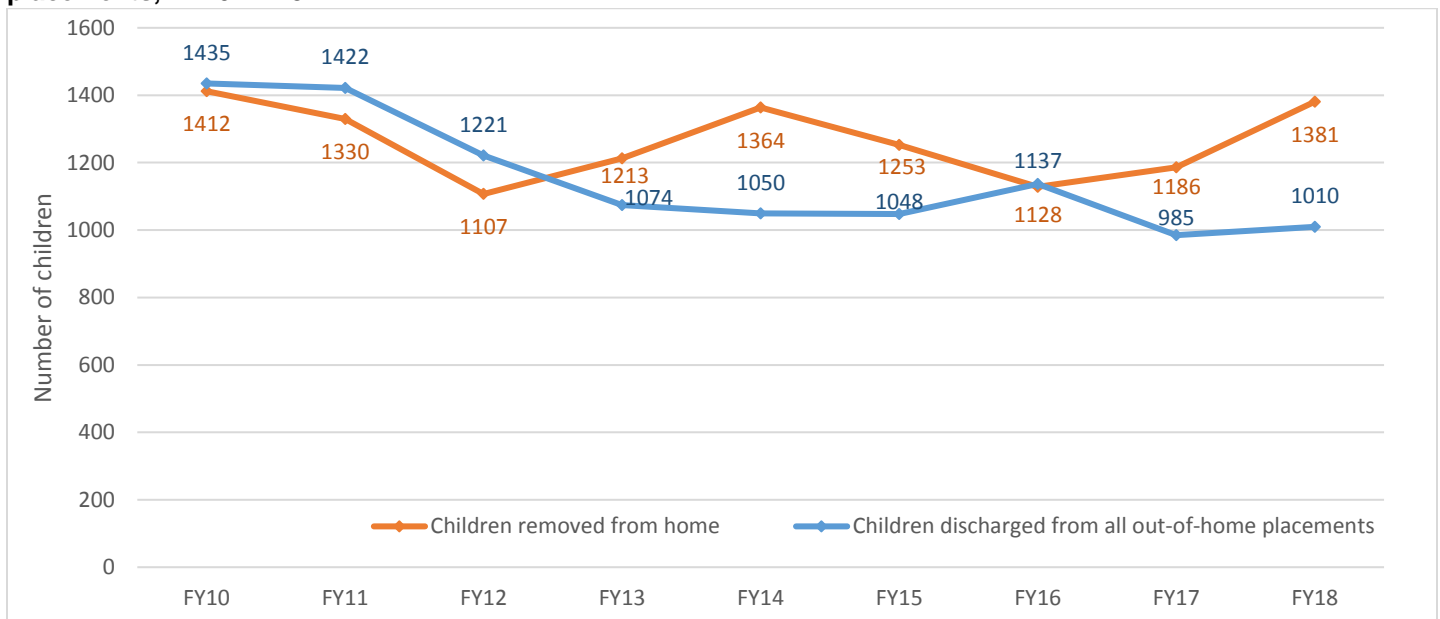

Note:

For trend comparison purposes please note: FY18 methodology for permanency (permanency achieved within 12 months and re-entries) data was slightly modified from previous years to be consistent with updated U.S. Children's Bureau methodology. Modifications include exclusion of children who were removed and remained in care for less than 8 days.

Snapshot of Children Removed and Children Discharged From All Placements Over Time

Over the past 8 years, discharges has seen a downward trend and removals have oscillated

Figure A. Number of children removed from home and number of children discharged from all out-of-home placements, FY10-FY18.

FY18

Section 1: Children entering out-of-home placement in FY16-FY18 (Entry cohorts FY16, FY17, and FY2018)

The data presented in Section 1 reflect an unduplicated count of all children under 18 years old removed from home and entering a RI DCYF out-of-home placement between July 1, 2015-June 30, 2018 (FY16-FY18), by fiscal year. The data include children in congregate care, specialized foster care, independent and semi-independent living, relative foster care, nonrelative foster care and court ordered.

Section 1 data notes:

- If a child had multiple removals in a fiscal year, the first removal record was selected to analyze unduplicated count.
- These figures may be slightly different from Federal Reports that report on a Federal Fiscal Year (October 1 to September 30 time periods)

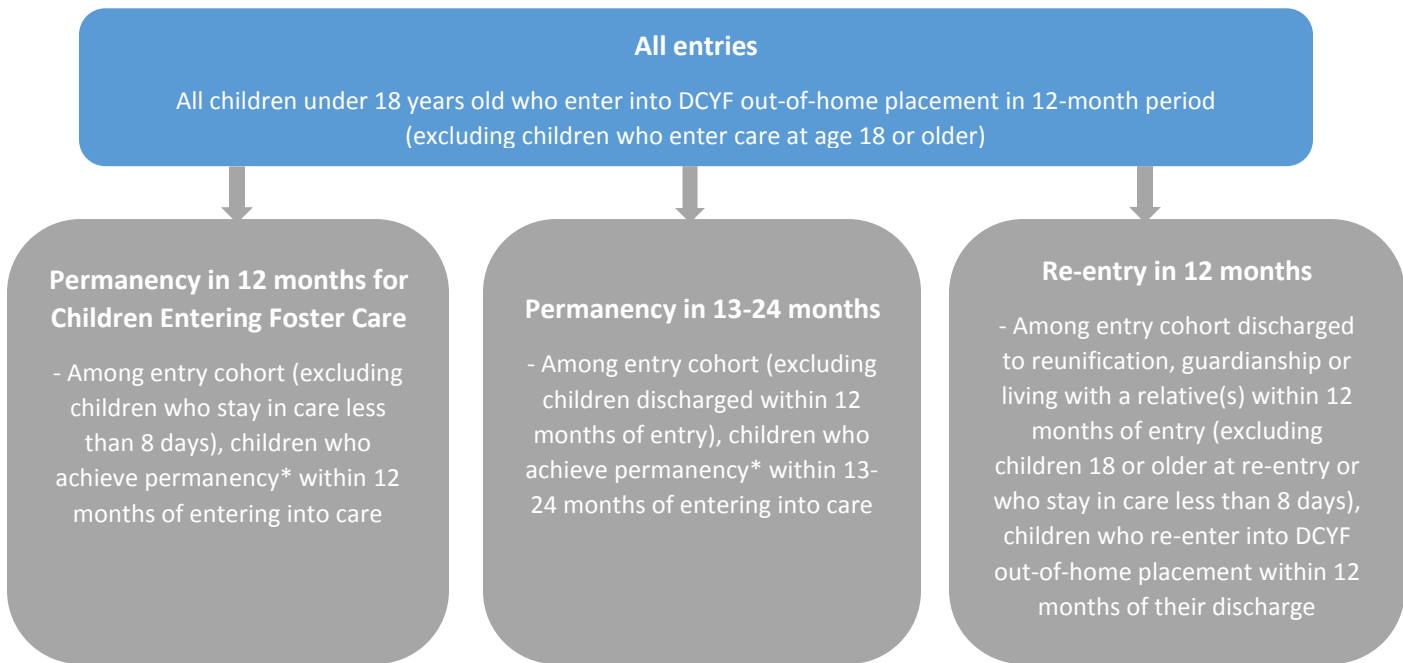

Table 1. Section 1: Stats at a Quick Glance: Among children under 18 years of age entering out-of-home placement in 12-month period – *The number of children removed increased over the three fiscal years*

	FY16 entry cohort	FY17 entry cohort	FY18 entry cohort
Number of children (unduplicated)	1128	1186	1381
Median age at removal	7	7	6
Removal rate (per 1,000 children under 18 years old in Rhode Island)	4.8	5.1	6.7

Notes: Some numbers are revised to reflect current data and may be different from last year's report.

*permanency: discharge to all out-of-home placements to reunification, adoption, guardianship and living with a relative.

FY18 Highlights: Demographics among children entering out-of-home placement

Almost half of children entering out-of-home placement were age 0-5 years old.

Figure 1. Demographics of children entering out-of-home placement, FY18 entry cohort (N=1381)

Notes:

- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children entering out-of-home placement in FY16-FY18, continued

FY16-18 Trend Highlights: Demographics among children entering out-of-home placement

In FY18 entry cohort, the absolute **number and percent of children age 0-11 increased** from FY17.

All racial and ethnic groups increased in removals except for Multiracial/Other Non-Hispanic.

The **median age** of removal among Black Non-Hispanic and Hispanic decreased across the three fiscal years.

Although the percent of children **age 12-16** decreased the absolute number remained relatively stable from FY17.

Table 2. Median age at removal and demographics of children entering out-of-home placement, FY16-FY18 entry cohorts

	FY16 (N=1128)		FY17 (N=1186)		FY18 (N=1381)	
	N	%	N	%	N	%
Gender						
Female	537	47.6%	535	45.1%	661	47.9%
Male	591	52.4%	651	54.9%	720	52.1%
Race and Ethnicity						
Black Non-Hispanic	144	12.8%	139	11.7%	171	12.4%
Hispanic	321	28.5%	347	29.3%	412	29.8%
Multiracial/other Non-Hispanic	154	13.7%	151	12.7%	144	10.4%
White Non-Hispanic	501	44.4%	542	45.7%	630	45.6%
Unknown/Missing	8	0.7%	7	0.6%	24	1.7%
Age at removal						
0-5 years	503	44.6%	513	43.3%	654	47.4%
6-11 years	202	17.9%	242	20.4%	307	22.2%
12-16 years	356	31.6%	345	29.1%	346	25.1%
17 years	67	5.9%	86	7.3%	74	5.4%
Median age at removal (years)	7		7		6	

Figure 2. Median age at Removal by Race and Ethnicity, FY16-FY18 Entry Cohort

Notes:

- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children entering out-of-home placement in FY16-FY18, continued

FY18 Highlights: Percent of children entering out-of-home placement compared to population estimate of children in RI: **Disproportionality**

Children age 0-9 who are Multiracial were overrepresented with 15.1% entered an out-of-home placement while 6.8% of Multiracial age 0-9 are in the RI population.

Children age 10-17 who are Black or African American, Multiracial or Hispanic were overrepresented in entering into an out-of-home placement compared to their RI census population.

Figure 3. Percent of children entering out-of-home placement and population estimate of children age 0-9 in Rhode Island, by race and ethnicity, FY18 entry cohort

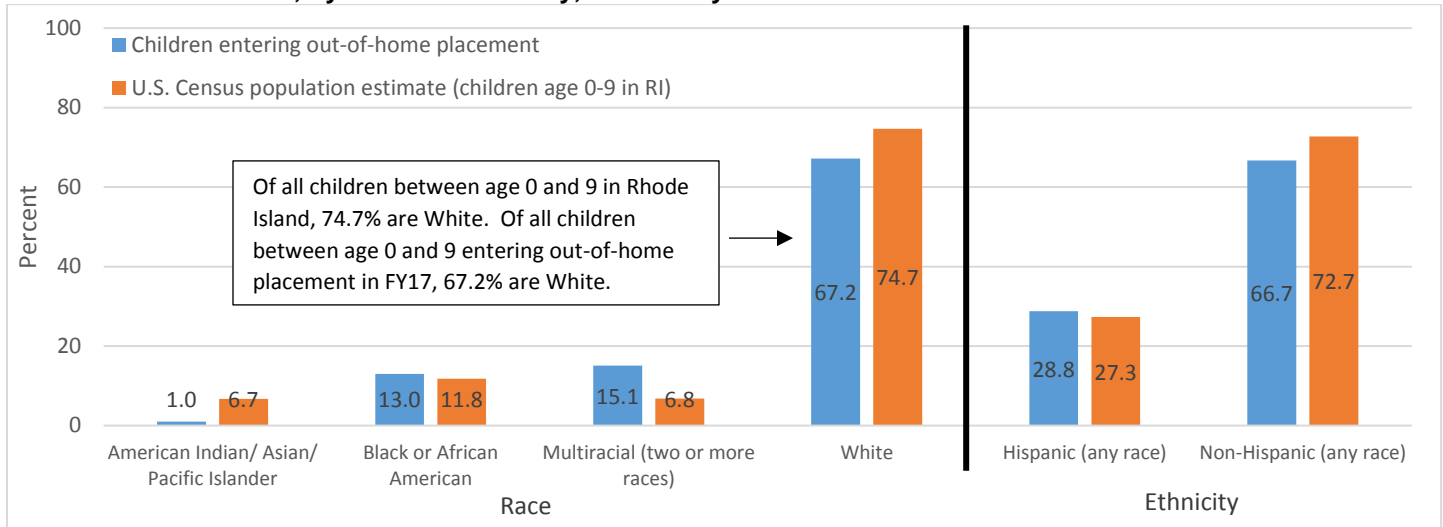

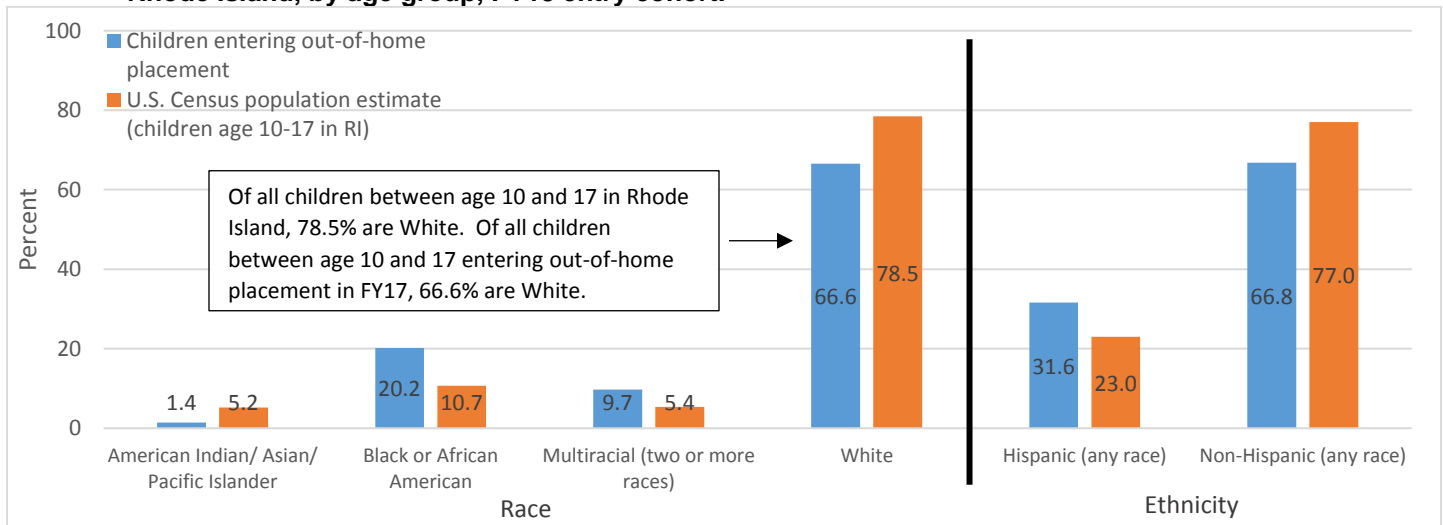

Figure 4. Percent of children entering out-of-home placement and population estimate of children age 10-17 in Rhode Island, by age group, FY18 entry cohort.

Data Source: U.S. Census population estimate 2017.

Notes:

- Children with unknown race and ethnicity are not shown.
- Children with out-of-state case address are excluded.

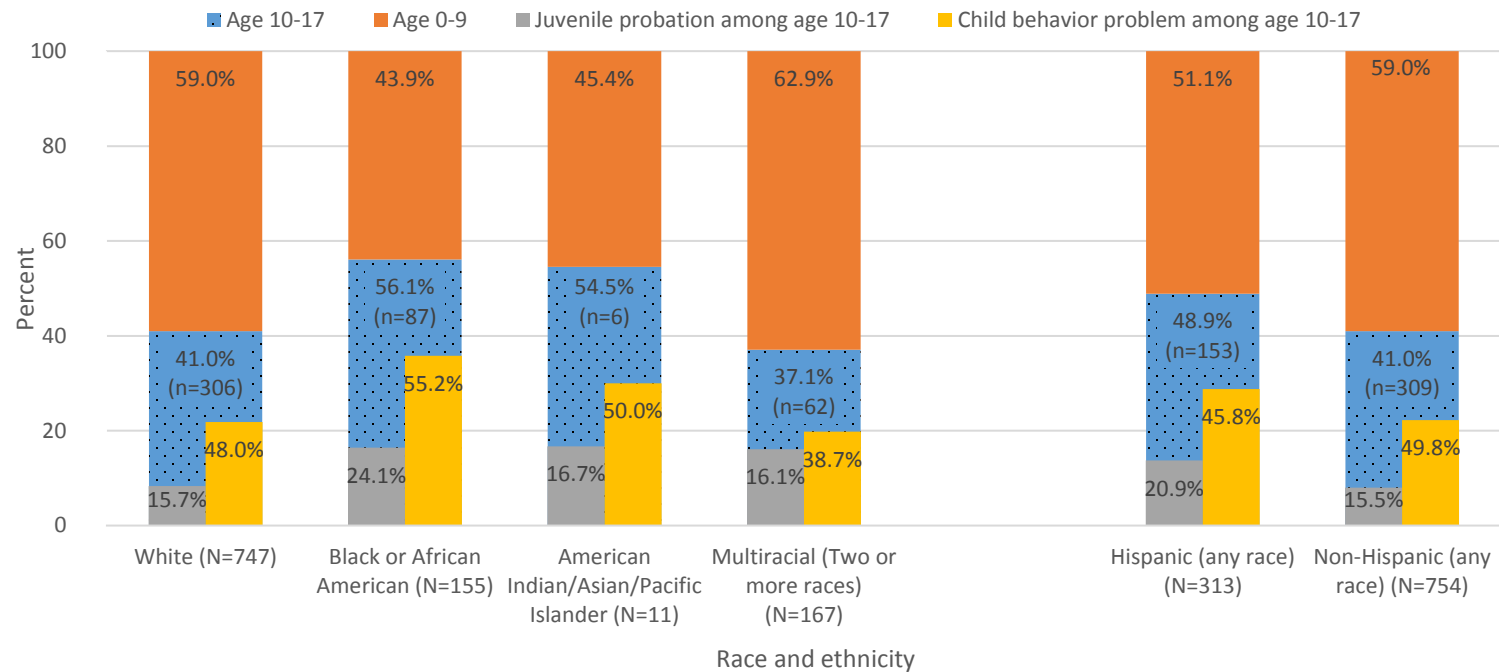

Children entering out-of-home placement in FY16-FY18, continued

FY18 Highlights: Disproportionality in age of children entering out-of-home placement, by race and ethnicity

Black or African American children have a higher proportion of children age 10-17 removed compared to White children age 10-17.

Exploring the disproportionality among children age 10-17 further, Black or African American have a higher proportion of children removed with a removal reason of child behavior compared to White children.

Figure 5. Disproportionality in age of children entering out-of-home placement and percent among age 10-17 entering due to child behavior problem or currently assigned to juvenile probation, by race and ethnicity, FY18 entry cohort

Notes: Children with unknown race and ethnicity are excluded.

Children entering out-of-home placement in FY16-FY18, continued

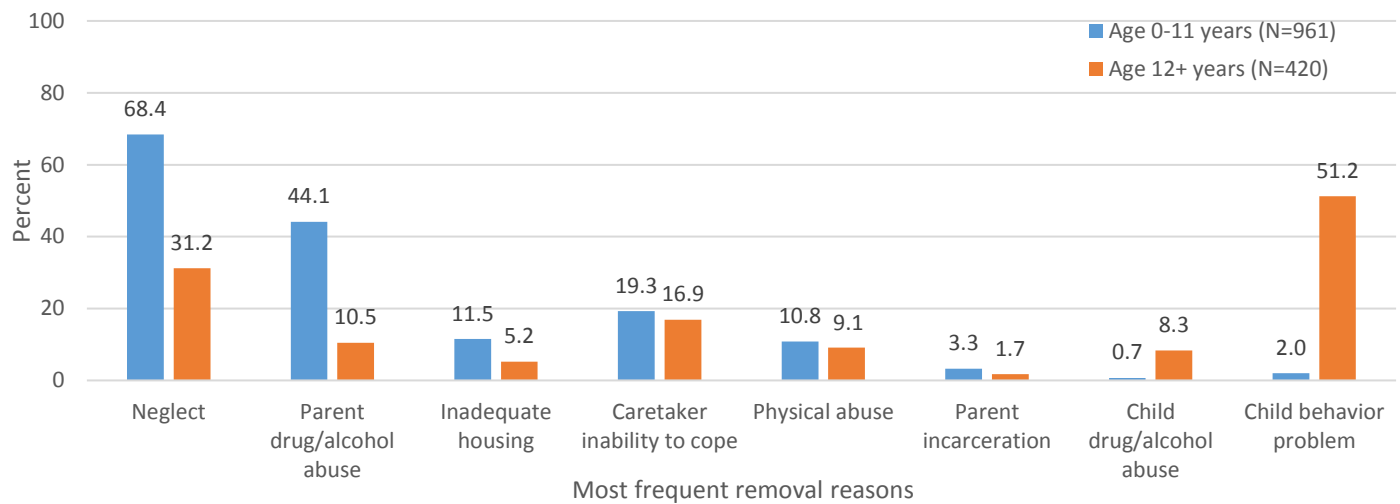

FY18 Highlights: Removal reasons among children entering out-of-home placement

Children age 0-11 most frequent removal reasons were neglect, parent drug/alcohol abuse, and caretaker inability to cope. The relationship between young age and maltreatment observed in RI is consistent with national data.

Children age 12 and older most frequent removal reasons were child behavior, caretaker inability to cope, and child drug/alcohol abuse.

For both age groups, caretaker inability to cope is in the top 3 reasons for removal.

Figure 6. Percent of children entering out-of-home placement, by most frequent removal reasons and age at removal, FY18 entry cohort

Notes:

- Percentages may add up to over 100% because a youth may have multiple removal reasons.
- Only the most frequent removal reasons are shown. Other removal reasons have percentage less than 5%.

Children entering out-of-home placement in FY16-FY18, continued

FY16-FY18 Trend Highlights: Removal reasons among children entering out-of-home placement

Children age 0-11 In FY16-FY18 the **top three removal reasons** were neglect, parent drug/alcohol abuse and caretaker inability to cope. During this time period, both the number and percent of children removed due to **physical abuse increased**.

Children age 12 and older In FY16-FY18 the **top three removal reasons** were child behavior, neglect and caretaker inability to cope.

FY18 saw an increase among both the number and percent of **children age 12 and older removed due to neglect AND a decrease in the number and percent of children in this age removed due to child behavior decreased**.

Table 3. Number and percent of children entering out-of-home placement, by removal reason and age at removal, FY16-FY18 entry cohorts

Removal Reason	Age 0-11 years						Age 12+ years					
	FY16 (N=705)		FY17 (N=755)		FY18 (N=961)		FY16 (N=423)		FY17 (N=431)		FY18 (N=420)	
	N	%	N	%	N	%	N	%	N	%	N	%
Neglect	463	65.7%	515	68.2%	657	68.4%	93	22.0%	105	24.4%	131	31.2%
Parent drug/alcohol abuse	323	45.8%	339	44.9%	424	44.1%	44	10.4%	62	14.4%	44	10.5%
Inadequate housing	96	13.6%	107	14.2%	110	11.5%	11	2.6%	20	4.6%	22	5.2%
Caretaker inability to cope	139	19.7%	122	16.2%	185	19.3%	80	18.9%	74	17.2%	71	16.9%
Physical abuse	53	7.5%	72	9.5%	104	10.8%	39	9.2%	34	7.9%	38	9.1%
Parent incarceration	41	5.8%	41	5.4%	32	3.3%	9	2.1%	10	2.3%	7	1.7%
Child drug/alcohol abuse	12	1.7%	13	1.7%	7	0.7%	35	8.3%	36	8.4%	35	8.3%
Child behavior problem	13	1.8%	26	3.4%	19	2.0%	269	63.6%	262	60.8%	215	51.2%
Sexual abuse	16	2.3%	14	1.8%	10	1.0%	23	5.4%	14	3.3%	22	5.2%
Clinical diagnosis	2	0.3%	3	0.4%	12	1.3%	10	2.4%	9	2.1%	16	3.8%
Parent death	2	0.3%	16	2.1%	8	0.8%	4	1.0%	4	0.9%	5	1.2%
Abandonment	18	2.6%	24	3.2%	16	1.7%	10	2.4%	14	3.3%	15	3.6%
Relinquishment	3	0.4%	3	0.4%	5	0.5%	2	0.5%	3	0.7%	3	0.7%

Notes:

- Percentages may add up to over 100% because a child may have multiple removal reasons.
- Some numbers are revised to reflect current data and may be different from last year's report.

FY18 Highlights: Disproportionality in removal reasons among children entering out-of-home placement

To test for disproportionality among racial and ethnic groups, an odds ratio, controlling for age was conducted. The reference group (comparison group) is White Non-Hispanic. Racial and ethnic groups are compared to White Non-Hispanic.

In FY18, parent drug/alcohol abuse removal reason was significantly lower for Black Non-Hispanic, Multiracial Non-Hispanic, and Hispanic children compared to White Non-Hispanic children. This trend of significance was also observed in the FY13-FY16 entry cohort (See Permanency Report FY13-FY16 on RI DCYF website).

In FY18, Black Non-Hispanic children had significantly higher odds of entering with removal reasons of physical abuse and caretaker inability to cope compared to White Non-Hispanic children.

Hispanic children had significantly higher odds of entering with a removal reason of neglect compared to White Non-Hispanic in FY18.

Table 4. Disproportionality in most frequent removal reasons for children entering out-of-home placement, by race and ethnicity, FY18 entry cohort

	White Non-Hispanic (reference group) (N=630)	Black Non-Hispanic (N=171)	Multiracial/other Non- Hispanic (N=144)	Hispanic (N=412)
Median age at removal	6	9	4	6.5
Removal Reasons				
Neglect	55.4%	49.7%	63.2%	60.0%**
Parent drug/alcohol abuse	42.5%	28.1%**	31.3%**	23.8%**
Inadequate housing	11.1%	6.4%	11.1%	8.0%
Caretaker inability to cope	20.0%	11.7%**	22.9%	18.0%
Physical abuse	8.1%	17.5%**	10.4%	10.4%
Parent incarceration	2.5%	1.8%	4.9%	2.4%
Child drug/alcohol abuse	3.8%	2.9%	1.4%	2.2%**
Child behavior problem	15.4%	24.0%	16.0%**	17.2%

** : odds ratio statistically significant compared to reference group (White Non-Hispanic), controlling for age.

Notes:

- Percentages may add up to over 100% because a child may have multiple removal reasons.
- Children with unknown race and ethnicity are excluded from the table because of small number.
- Denominator is all children in a given race and ethnicity. Numerator presents percent removed by removal reason among the given race and ethnicity.
- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.

FY18 Highlights: First placement among children entering out-of-home placement

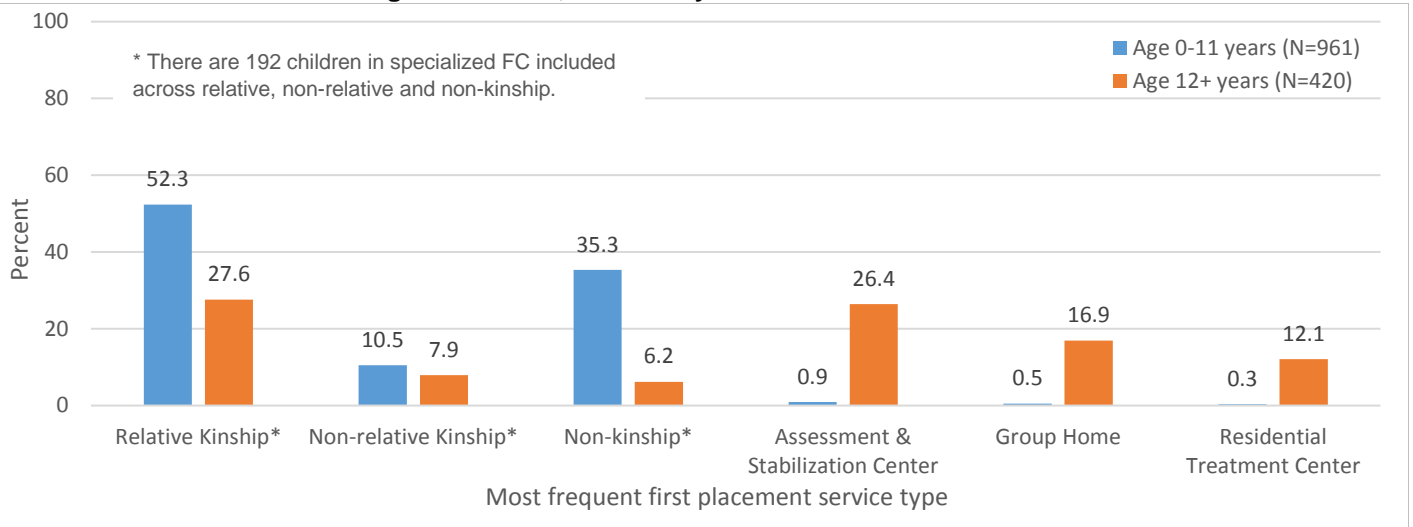

Children age 0-11 In FY18 are most frequently placed in a family like setting for their first placement.

Children age 0-12 In FY18, are most frequently placed in congregate care for their first placement. **Among the children age 12 and older whose first placement is a family, a greater percentage of those are in a kinship**

placement.

Picture source: www.adoptionri.org

Figure 7. Percent of children entering out-of-home placement, by most frequent first placement service types of current removal and age at removal, FY18 entry cohort

Notes:

- Above figure reflects only the most frequent first placement types. Children may also enter into acute residential treatment, independent living, semi-independent living, psychiatric hospital or medical hospital. See next page for the complete list of first placement service types.

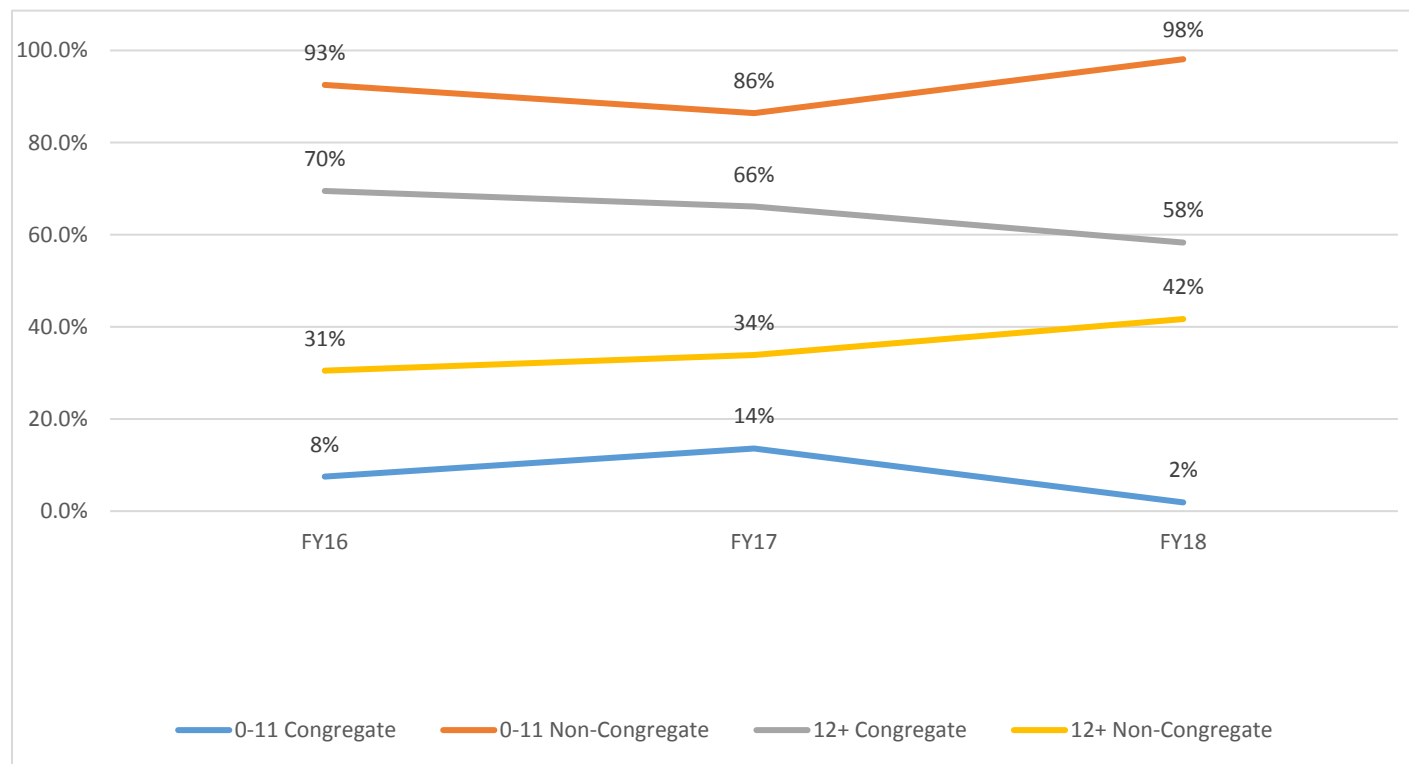

Children entering out-of-home placement in FY16-FY18, continued

FY16-FY18 Trend Highlights: First placement among children entering out-of-home placement

Children age 0-11 Across the three fiscal years, children age 0-11 are frequently placed in a family like setting as their first placement **while children age 12 and older** are more frequently placed in congregate care settings.

The percentage of children age 12 and older first placement in congregate care decreased FY16-FY18. In this age group, the largest increases in family like settings first placement type occurred in relative kinship followed by non-relative kinship.

Figure 8. First Placement Service Type of Current Removal by Age Category, FY16-FY18 entry cohorts

Children entering out-of-home placement in FY16-FY18, continued

Table 5. Number and percent of children entering out-of-home placement, by first placement service type of current removal and age group, FY16-FY18 entry cohorts

First Placement Service Type of Current Removal	Age 0-11 years						Age 12+ years					
	FY16		FY17		FY18		FY16		FY17		FY18	
	N	%	N	%	N	%	N	%	N	%	N	%
Relative Kinship*	367	52.1%	376	49.8%	503	52.3%	85	20.1%	94	21.8%	116	27.6%
Non-relative Kinship*	60	8.5%	59	7.8%	101	10.5%	16	3.8%	23	5.3%	33	7.9%
Non-kinship*	225	31.9%	217	28.7%	339	35.3%	28	6.6%	29	6.7%	26	6.2%

Psychiatric Hospital	0	0.0%	0	0.0%	0	0.0%	0	0.0%	0	0.0%	0	0.0%
Medical Hospital	0	0.0%	0	0.0%	0	0.0%	0	0.0%	0	0.0%	0	0.0%
Total	705	100.0%	755	100.0%	961	100.0%	423	100.0%	431	100.0%	420	100.0%

* There are 104 children in FY16, 115 children in FY17, and 192 children in FY18 who entered first placement service type of specialized foster care included across relative kinship, non-relative kinship and non-kinship.

Notes:

- Congregate care includes acute residential treatment, assessment & stabilization center, group home, medical hospital, psychiatric hospital, semi-independent living, RCC, residential treatment – substance abuse and residential treatment center.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children entering out-of-home placement in FY16-FY18, continued

FY18 Highlights: Disproportionality in first placement among children entering out-of-home placement

To test for disproportionality among racial and ethnic groups, an odds ratio, controlling for age was conducted. The reference group (comparison group) is White Non-Hispanic. Racial and ethnic groups are compared to White Non-Hispanic.

*Black Non-Hispanic children and Hispanic children **did not have statistically different odds** of being placed in congregate care compared to White Non-Hispanic children. This is a reverse from FY17, both Black Non-Hispanic children and Hispanic children had a significantly higher odds (controlling for age) of being placed in congregate care.*

Figure 9. Disproportionality in first placement service types of current removal for children entering out-of-home placement, FY18 entry cohort

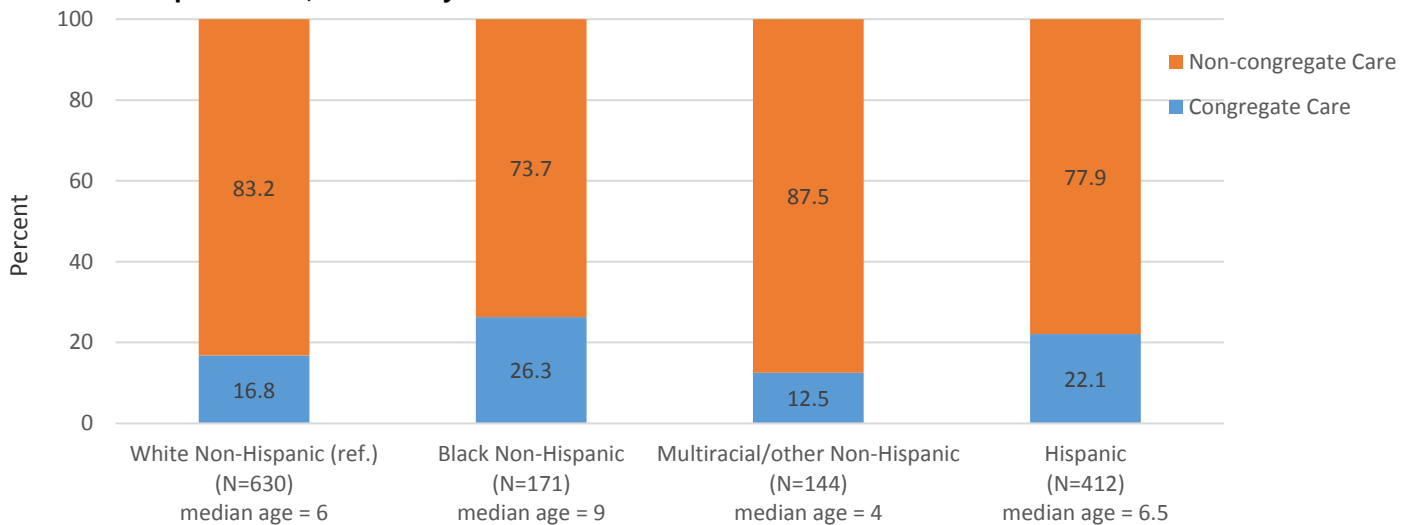

Table 6. Disproportionality in most frequent first placement service types of current removal for children entering out-of-home placement, by race and ethnicity, FY18 entry cohort

	White Non-Hispanic (reference group) (N=630)	Black Non-Hispanic (N=171)	Multiracial/other Non-Hispanic (N=144)	Hispanic (N=412)
Median age at removal	6	9	4	6.5
First Placement Service Type				
Relative Kinship	49.4%	39.8%	50.0%	37.9%
Non-relative Kinship	10.0%	5.9%	10.4%	10.2%
Non-kinship	23.8%	28.1%	27.1%	29.9%
Assessment & Stabilization Center	7.6%	13.5%	2.8%	10.7%
Group Home	3.8%	8.8%	5.6%	7.0%
Residential Treatment Center	4.4%	4.1%	2.1%	3.6%

Notes:

- Children with unknown race and ethnicity are excluded from the table because of small number.
- Denominator is all children in a given race and ethnicity. Numerator presents percent entered into first placement service type among the given race and ethnicity.
- Congregate care includes acute residential treatment, assessment & stabilization center, group home, medical hospital, psychiatric hospital, semi-independent living, RCC, residential treatment – substance abuse and residential treatment center.
- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander

Children entering out-of-home placement in FY16-FY18, continued

FY18 Highlights: Geographic location of children entering out-of-home placement

In FY18, the removal rate of children (age less than 18) entering an out-of-home placement in RI was 6.7 per 1,000 children. Figure 8. provides removal rates of children entering an out-of-home placement for the State and by city/town.

Figure 10. Rate of children entering out-of-home placement per 1,000 children under 18 years old in Rhode Island, by case town of removal, FY18 entry cohort

Data Source: U.S. Census 2017 population estimate for children under 18.

Notes:

- Children with out-of-state or unknown case addresses are excluded.
- If a child moved to a different address after removal, the case town may not reflect the town at the time of removal.

FY16-FY17

FY17-FY18

Section 2: Children achieving permanency in FY15-FY18 within 12 months of entry (Entry cohorts FY15, FY16 and FY17)

The data presented in Section 2 mainly focus on children under 18 years old who entered RI DCYF out-of-home placement between July 1, 2014-June 30, 2017 (FY15-FY17) and achieved permanency within 12 months of the entry. The data in this section reflect Child and Family Service Reviews (CFSR) Round 3 inclusion and exclusion criteria: children who stayed for less than 8 days in out-of-home placement are excluded. Children who discharge at age 18 are included but not counted as achieving permanency. The definition of permanency is consistent with CFSR Round 3 measures and includes discharge from all out-of-home placements with reason of reunification with parents, adoption, direct consent adoption, living with a relative(s) or guardianship.

Section 2 data notes:

- If a child had multiple removals in a fiscal year, the first removal record was selected to analyze unduplicated count.
- These figures may be slightly different from Federal Reports that report on a Federal Fiscal Year (October 1 to September 30 time periods)

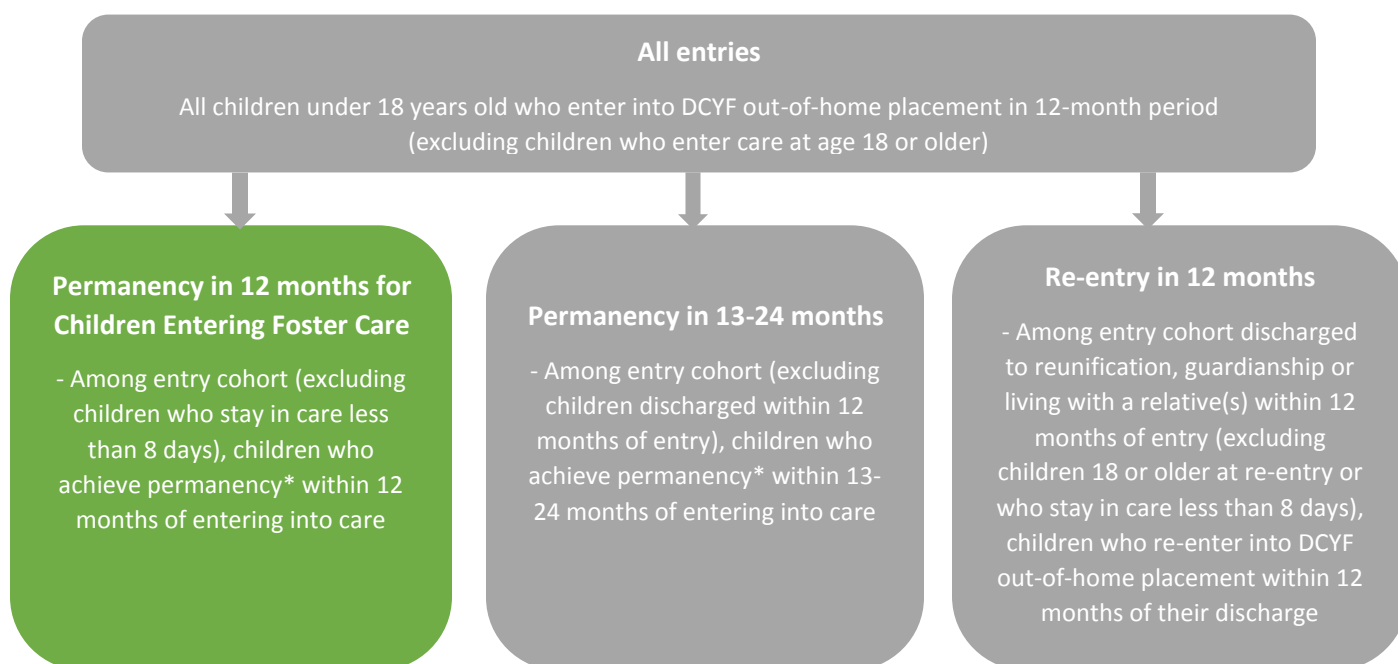

Table 7. Section 2: Stats at a Quick Glance: Among Entry Cohort FY15-FY17 Permanency Achievement Within 12 Months of Entry

	FY15-FY16 Permanency Achieved	FY16-FY17 Permanency Achieved	FY17-FY18 Permanency Achieved
Percent achieved permanency	39.7%	40.3%	34.8%
Median age at removal for children achieved permanency	10	9	8
Median length of time (days) in placement for children achieved permanency	174.0	182.0	187.0
Of children achieved permanency, percent who entered into first placement of congregate care	46.4%	39.0%	38.3%

* Permanency includes discharge reasons of adoption, direct consent adoption, reunification, living with a relative(s) and guardianship.

Notes: Some numbers are revised to reflect current data and may be different from last year's report.

FY15-FY18 Trend Highlights: Permanency achieved within 12 months of entry

35% of children who entered an out-of-home placement in FY17 achieved permanency within 12 months of entry. This was a decrease from the previous year (entry cohort). Children discharged without achieving permanency remained relatively constant over the 3 years.

Children remaining in care longer than 12 months increased from about 55% among FY15 entry cohort to 62% among FY17 entry cohort. Previous data analysis by the Department revealed a host of positive outcomes of children in foster family settings however longer lengths of stay are associated with children in foster families. The Department efforts to increase children in foster family settings has resulted in more children in foster family settings.

Figure 11. Percent of children achieving permanency within 12 months of entering out-home placement, FY17 entry cohort

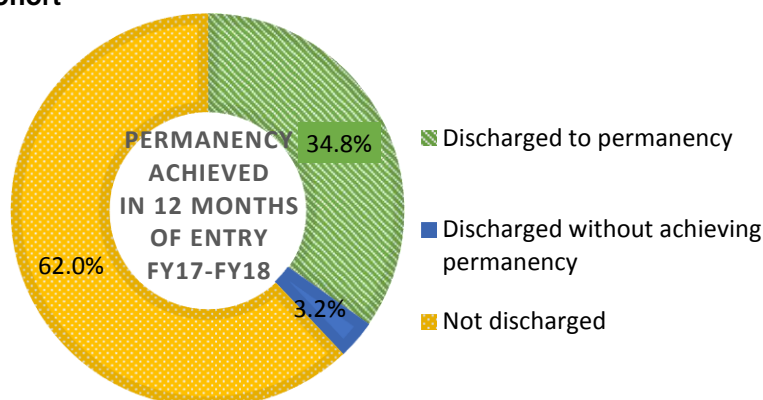

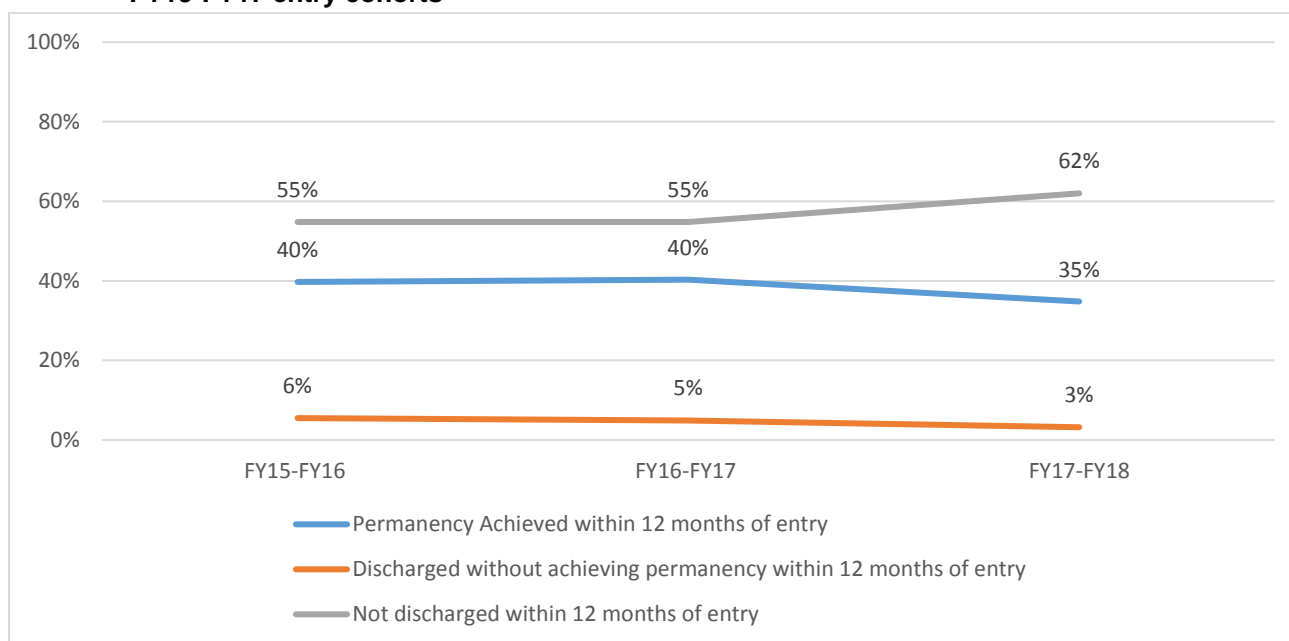

Figure 12. Percent of children achieving permanency within 12 months of entering out-of-home placement, FY15-FY17 entry cohorts

* There are 21 children in FY15, 15 children in FY16 and 11 children in FY17 who discharged to permanency within 12 months of entry at age 18 but classified as not achieving permanency to stay consistent with CFSR Round 3.

Notes:

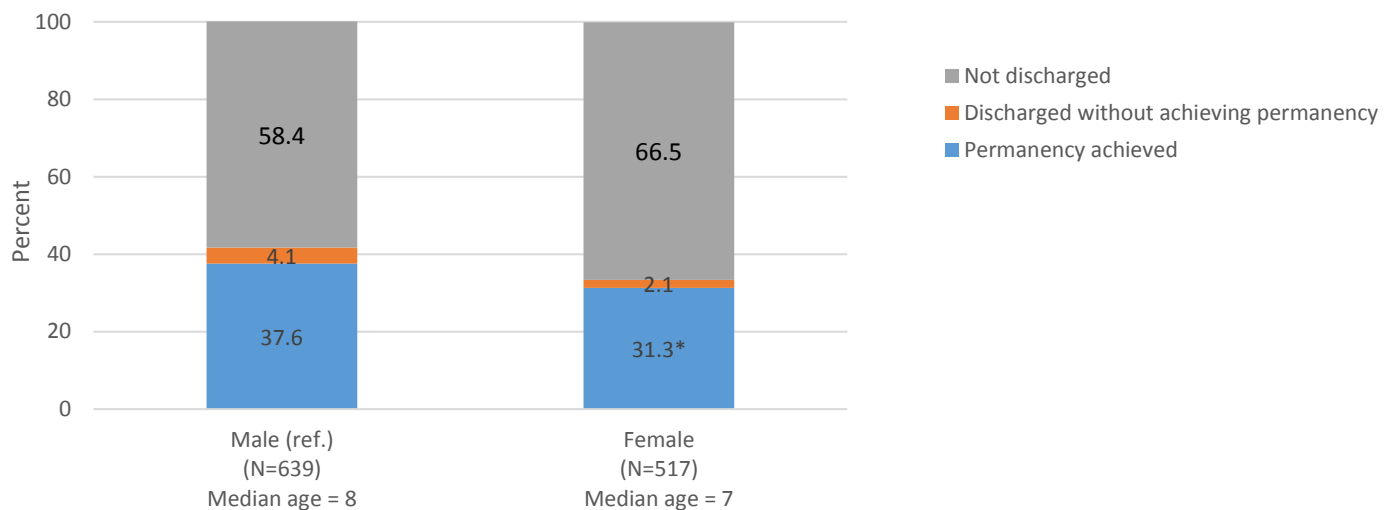

- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. Children discharged at 18 or older are counted as not achieving permanency. Some numbers are revised to reflect current data and may be different from last year's report.

Children achieving permanency in FY15-FY18 within 12 months of entry, continued

FY15-FY18 Trend Highlights: Disproportionality in permanency achieved within 12 months of entry, by gender

For two of the three entry cohort years, FY15 and FY17 entry cohort, **females had significantly lower odds of achieving permanency within 12 months** of entry compared to males, after controlling for age.

Figure 13. Disproportionality in permanency achieved 12 months of entering out-of-home placement, by gender, FY17 entry cohort (see appendix for demographics)

*: age-adjusted odds ratio statistically significant compared to the reference group (male).

Notes:

- Denominator is all children in a given gender. Numerator presents percent achieved permanency among the given gender.
- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. Children who discharged at 18 or older are counted as not achieving permanency.
- Odds ratio is calculated excluding discharged without achieving permanency group.

Children achieving permanency in FY15-FY18 within 12 months of entry, continued

FY15-FY18 Trend Highlights: Disproportionality in permanency achieved within 12 months of entry, by race and ethnicity

To test for disproportionality among racial and ethnic groups, an odds ratio, controlling for age was conducted. Racial and ethnic groups were compared to the reference group (comparison group), White Non-Hispanic.

After controlling for age, there was **no statistical difference in achieving permanency within 12 months** observed in FY15-FY17 entry cohorts.

Figure 14. Disproportionality in permanency achieved within 12 months of entering out-of-home placement, by race and ethnicity, FY17 entry cohort (see appendix for demographics)

*: age-adjusted odds ratio statistically significant compared to the reference group (White Non-Hispanic).

Notes:

- Denominator is all children in a given race/ethnicity. Numerator presents percent achieved permanency among the given race/ethnicity.
- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.
- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. Children who discharged at 18 or older are counted as not achieving permanency.
- Odds ratio is calculated excluding discharged without achieving permanency group.

FY15-FY18 Trend Highlights: Median length of time in all placements combined among children achieving permanency by permanency reason

Reason of reunification across the three fiscal years, was the most prevalent reason among children who discharged within 12 months of entry.

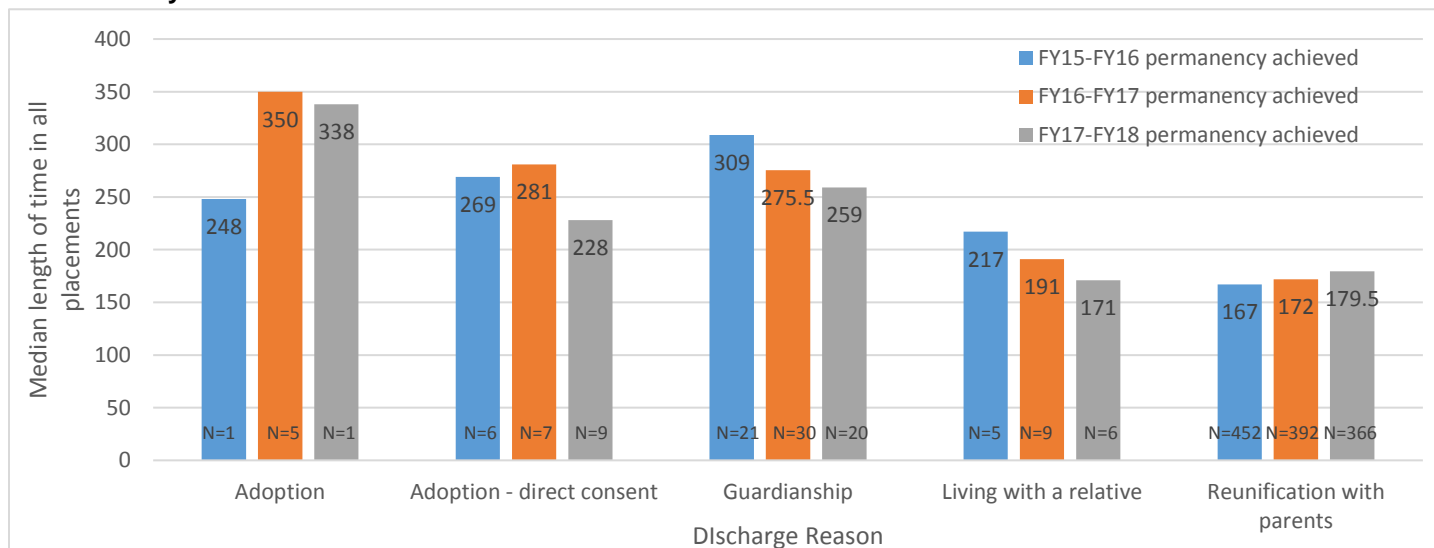

The **median length** of time to achieve **reunification** increased slightly over this time period.

The **median length** of time to achieve permanency through **adoption or guardianship** decreased among the FY17 entry cohort compared to the FY16 entry cohort.

Picture source: www.adoptionri.org

Figure 15. Median length of time in all placements combined in the episode (days) for children achieving permanency within 12 months of entering out-of-home placements, by discharge reason, FY15-FY17 entry cohort

Notes:

- There are 67 children in FY15 entry cohort, 54 children in FY16 entry cohort and 37 children in FY17 entry cohort who discharged without achieving permanency. Their median length of time in all placements combined were 177 days for FY15, 208.5 days for FY16 and 190 days for FY17.
- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. Children who discharged at 18 or older are counted as not achieving permanency.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children achieving permanency in FY15-FY18 within 12 months of entry, continued

FY15-FY18 Trend Highlights: Permanency achieved within 12 months of entry by age groups

Across three entry cohort years, **discharge to reunification within 12 months was the most frequent permanency reason** among all age groups except for children age 17.

Among children age 17 and older, there was a slight decrease in the percent discharged without achieving permanency, from 60% in FY15 to 55% in FY17, and a slight increase in the percent reunified with parents, from about 38% in FY15 to 41% in FY17.

Figure 16. Percent of children achieving permanency or discharged without achieving permanency within 12 months of entering out-of-home placement, by discharge reason and age at removal, FY17 entry cohort (N=439)

Children who discharged at age 18 or older are counted as not achieving permanency (regardless of their discharge reason) to stay consistent with CFSR Round 3.

Notes:

- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. AWOL, death of child, detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency may be categorized as "Other".
- Some numbers are revised to reflect current data and may be different from last year's report.

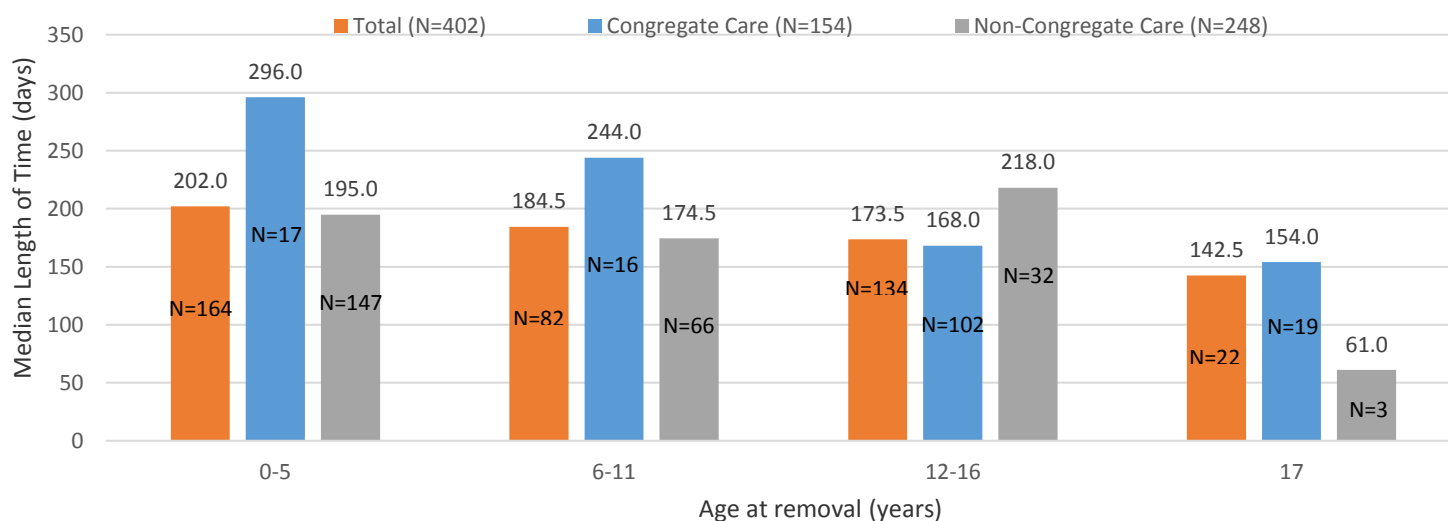

FY17-FY18 Highlights: Median length of time in all placements combined among children achieving permanency by first placement type

Across all age groups except for the age group 12-16, children who entered into first placement of congregate care had a longer median length of total time in out-of-home placement compared to those entered into first placement of non-congregate care. This is opposite of the trend observed in previous fiscal years. More children placed in foster families at some point in their out-of-home episode is associated with longer lengths of time to achieve permanency.

The 17 children age 0-5 only remained in congregate care for a median length of 5 days. All 17 children had a second placement with a foster family.

A child age 0-5 starting in congregate care experienced approximately 100 days more in an out-of-home placement (removal to discharge) compared to children age 0-5 whose initial placement is non-congregate care.

Figure 17. Median length of time in all placements combined in the out-of-home episode (days) for children achieving permanency within 12 months of entering out-of-home placements, by first placement type and age at removal, FY17 entry cohort (N=402)

Notes:

- Congregate care includes acute residential treatment, assessment & stabilization center, group home, medical hospital, psychiatric hospital, semi-independent living, RCC, residential treatment – substance abuse and residential treatment center.
- Some numbers are revised to reflect current data and may be different from last year's report

Section 3: Children achieving permanency in FY15-FY18 within 13-24 months of entry

Picture source: adoptionri.org

Entry cohort:		The year entry cohort achieved permanency:
FY14		FY15-FY16
FY15	➔	FY16-FY17
FY16		FY17-FY18

Section 3: Children achieving permanency in FY15-FY18 within 13-24 months of entry (Entry cohorts FY14, FY15 and FY16)

The data presented in Section 3 focus on children under 18 years old who entered RI DCYF out-of-home placement between July 1, 2013-June 30, 2016 (FY14-FY16) and achieved permanency within 13-24 months of the entry. The denominator for this section excludes children who achieved permanency or discharged without achieving permanency within 12 months of the entry. To stay consistent with Child and Family Service Reviews (CFSR) Round 3, children who discharged at age 18 are included but not counted as achieving permanency. The definition of permanency includes discharge from all out-of-home placements with reason of reunification with parents, adoption, direct consent adoption, living with a relative(s) or guardianship.

The method used in this report for permanency outcomes of children staying in care longer than 12 month is different from the method used in CFSR Round 3. Children's Bureau looks at among children who had been in care between 12 and 23 months as of the first day of a 12-month period, the percent who achieved permanency within 12 months of the first day. Using CFSR Round 3 method, 42.3.1% of children staying in care for 12-23 months (time period April 1, 2017-March 31,2018) (RI CFSR Data Profile October 2018, Children's Bureau).

Section 3 data notes:

- If a child had multiple removals in a fiscal year, the first removal record was selected to analyze unduplicated count.
- These figures may be slightly different from Federal Reports that report on a Federal Fiscal Year (October 1 to September 30 time periods)

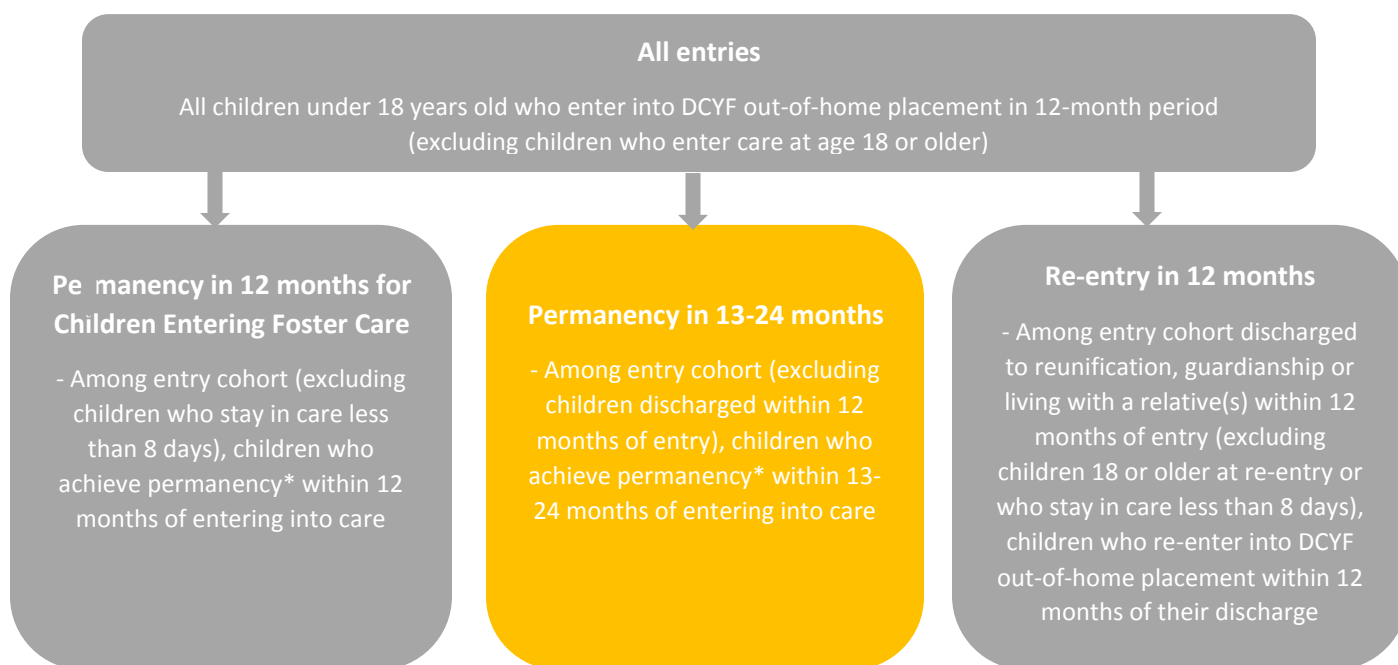

Table 8. Section 3: Stats at a Quick Glance: Among Entry Cohort FY14-FY16 Permanency Achievement Within 13-24 Months of Entry

	FY14-FY16 Permanency Achieved	FY15-FY17 Permanency Achieved	FY16-FY18 Permanency Achieved
Percent achieved permanency	45.4%	44.9%	48.0%
Median age at removal for children achieved permanency	4	4	4
Median length of time (days) in placement for children achieved permanency	558.0	524.0	509.0
Of children achieved permanency, percent who entered into first placement of congregate care	17.8%	16.3%	15.2%

* Permanency includes discharge reasons of adoption, direct consent adoption, reunification, living with a relative(s) and guardianship.

Notes: Some numbers are revised to reflect current data and may be different from last year's report

Children achieving permanency in FY15-FY18 within 13-24 months of entry, continued

Figure 18. Percent of children achieving permanency within 13-24 months of entering out-of-home placement, FY16 entry cohort (excluding children discharged within 12 months of entry)

FY15-FY18 Trend Highlights: Permanency achieved within 13-24 months of entry

Among the FY16 entry cohort who did not achieve permanency within 12 months or discharge, 602 children who remained in out-of-home placement. Among the 602 children, **48%, 289 children** achieved permanency within 13-24 months of removal

Table 9. Number and percent of children achieving permanency within 13-24 months of entering out-of-home placement, FY14-FY16 entry cohorts (excluding children who discharged within 12 months of entry)

Discharge type	FY14-FY16 Permanency Achieved		FY15-FY17 Permanency Achieved		FY16-FY18 Permanency Achieved	
	N	%	N	%	N	%
Permanency achieved within 13-24 months of entry	303	43.2%	304	45.4%	289	48.0%
Discharged without achieving permanency within 13-24 months of entry*	34	4.8%	45	6.7%	17	2.8%
Not discharged within 24 months of entry	365	52.0%	321	47.9%	296	49.2%
Total	701	100.0%	670	100.0%	602	100.0%

* There are 3 children in FY14, 7 children in FY15, and 6 children in FY16 entry cohort who discharged to permanency within 13-24 months of entry at age 18 but classified as not achieving permanency to stay consistent with CFSR Round 3.

Notes:

- Discharge without permanency includes children discharged with reasons of Emancipation, AWOL, Death of child, Detained at RITS, Subsidy ended, TCP revoked and Transfer to another agency. Children who discharged at 18 or older are counted as not achieving permanency.
- Some numbers are revised to reflect current data and may be different from last year's report

Children achieving permanency in FY15-FY18 within 13-24 months of entry, continued

Figure 19. Demographics of children achieving permanency within 13-24 months of entering out-of-home placements, FY16 entry cohort (excluding children who discharged within 12 months of entry)

FY14-FY16 Highlights: Figure 20:

Graph bars with higher percentages of blue and smaller percentages of orange, yellow and green are positive trends

To better understand whether an increase or decrease in permanency achieved within 13-24 months is a positive or negative trend requires observing these changes alongside other discharge reasons. **For example, if permanency achieved within 13-24 months decreases is this positive because permanency within 12 months increased? Or is it negative because more children are discharging without permanency or remaining in care?**

Figure 20 displays trends over time for racial and ethnic groups achieving permanency within 12 months (blue bar) and within 13-24 months (grey bar). The red dotted line surrounding a) permanency achieved within 13-24 months, b) discharged without permanency in 13-24 months, and c) not discharged to permanency in 13-24 months, represents the percentage of children who did not discharge to permanency within 12 months of entry.

The percentage of Black Non-Hispanic children achieving permanency within 12 months of entry has decreased across FY14-FY16 and the percentage of Black Non-Hispanic children not achieving permanency within 13-24 months has increased. The percentage of Multiracial children achieving permanency within 13-24 months of entry has increased, and the trends for percent achieving permanency FY14-FY16 for Hispanic and White Non-Hispanic children has stayed relatively the same over time.

Children achieving permanency in FY15-FY18 within 13-24 months of entry, continued

Permanency Report: Entry Cohort of Children in Foster Care

Section 4: Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s)

Entry cohort:

FY14

FY15

FY16

The year entry
cohort re-entered:

FY14-FY16

FY15-FY17

FY16-FY18

Section 4: Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s) (FY14, FY15 and FY16 entry cohort)

The data presented in Section 4 mainly focus on children under 18 years old who entered RI DCYF out-of-home placement between July 1, 2013-June 30, 2016 (FY14-FY16), discharged to reunification, living with a relative(s) or guardianship within 12 months of the entry and re-entered within 12 months of their discharge. Discharge to adoption are not included because a child is assigned a new identifier at adoption and cannot be tracked reliably. The definition of re-entry is consistent with Child and Family Service Reviews (CFSR) Round 3 measures. Data excludes children in care for less than 8 days and children who were 18 or older at discharge or re-entry. *The re-entry figure in this report does not adjust for age and number of entries as does the U.S. Children's Bureau.* The Department recognizes that age is related to re-entry rates and those states whose population is older than other states would be at higher risk for elevated re-entry rates. It is important to note that states are encouraged to monitor progress of their own state over time as although the adjustment takes into account age and entry rate, other factors contribute to re-entry rates that are unadjusted.

Section 4 data notes:

- If a child had multiple removals in a fiscal year, the first removal record was selected to analyze unduplicated count.
- These figures may be slightly different from Federal Reports that report on a Federal Fiscal Year (October 1 to September 30 time periods)

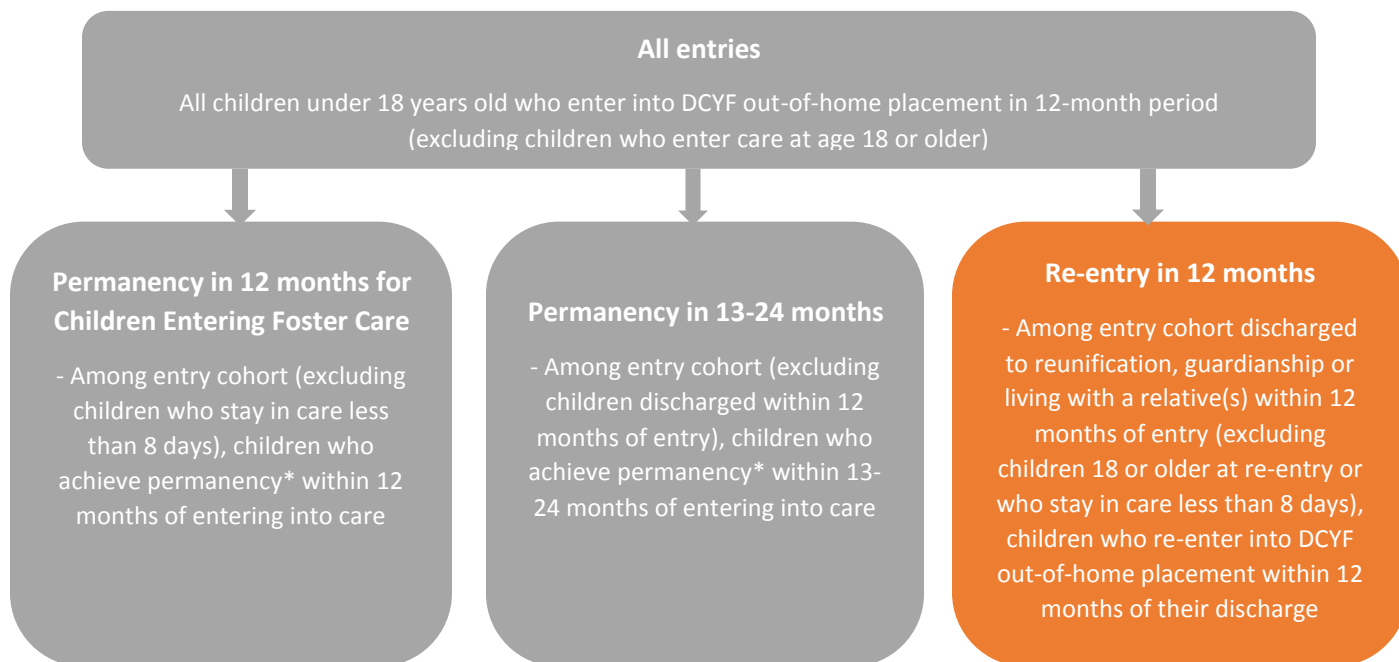

Table 14. Section 4: Stats at a Quick Glance: Among Entry Cohort FY14-FY16 Re-entering out-of-home placement within 12 Months of Entry

	FY14-16 Re-entry into Placement	FY15-FY17 Re-entry into Placement	FY16-FY18 Re-entry into Placement
Percent re-entered	18.3%*	21.5%*	19.7%*
Median age at re-entry	14	14	13
Median length of time (days) since previous discharge	144.0	140.0	146.0

* Percentages in this section are unadjusted for age and number of entries. Children's Bureau adjusts for age and number of entries.

Notes: Some numbers are revised to reflect current data and may be different from last year's report.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY14-FY18 Trend Highlights: Re-entry within 12 months of discharge to reunification, guardianship or living with relatives

Among children re-entering into placement FY16-FY18, **80.3% of children sustained permanency within 12 months of discharging to reunification, guardianship or living with a relative.** (FY16 entry cohort),

Figure 23. Number and percent of children re-entering out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), FY16 entry cohort (N =431)

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Re-entry within 12 months of discharge to reunification, guardianship, living with relatives

The largest age group among the FY16 entry cohort who re-entered was age 12-16.

Among the FY15 entry cohort, the largest percentage of children re-entering were White Non-Hispanic, which may be a function of the absolute greater number of White Non-Hispanic children in out-of-home placements and in RI compared to children of other racial and ethnic groups.

Figure 24. Demographics of children re-entering out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), FY16 entry cohort (N=431)

Notes:

- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Disproportionality in children re-entering out-of-home placement

To test for disproportionality among racial and ethnic groups, an odds ratio, controlling for age was conducted. The reference group (comparison group) is White Non-Hispanic. Racial and ethnic groups are compared to White Non-Hispanic.

For FY16 entry cohort, there was no statistical difference between racial and ethnic groups when controlling for age. This same trend was seen in the FY15 entry cohort.

Figure 25. Disproportionality in children re-entering out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), FY16 entry cohort

** : odds ratio statistically significant compared to reference group (White Non-Hispanic), controlling for age.

Notes:

- Multiracial/other includes Multiracial Non-Hispanic, Asian, American Indian and Pacific Islander.
- Denominator is all children in a given race and ethnicity. Numerator presents percent re-entering into out-of-home placement among the given race and ethnicity.
- Children with unknown race and ethnicity are excluded.

Data source: RICIST report 460; data are current as of 9/12/2018.

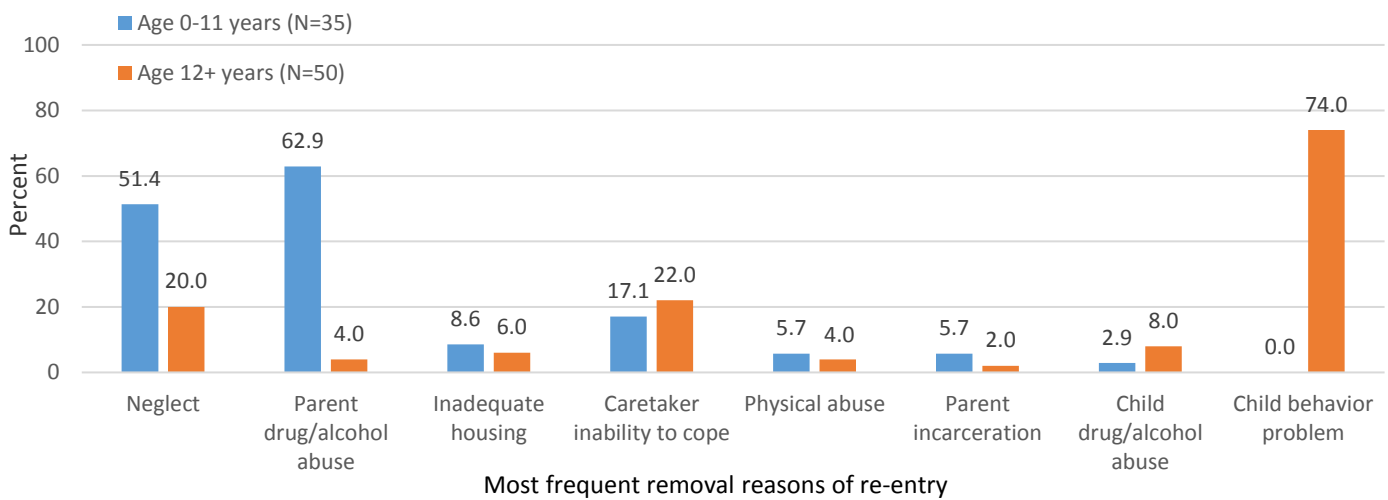

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Removal reasons among children re-entering out-of-home placement

Children age 0-11 re-entering an out-of-home placement in FY16-FY18 most frequent removal reasons were parent drug/alcohol abuse (62.9%), neglect (51.4%), caretaker inability to cope (17.1%), and inadequate housing (8.6%).

Children age 12 and older re-entering an out-of-home placement in FY16-FY18 most frequent removal reasons were child behavior (74.0%), caretaker inability to cope (22.0%), and neglect (20.0%).

Figure 26. Percent of children re-entering into out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), by most frequent removal reasons of re-entry and age at initial removal, FY16 entry cohort

Notes:

- Percentages may add up to over 100% because a youth may have multiple removal reasons.
- Only the most frequent removal reasons are shown. Other removal reasons have percentage less than 5%.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

Notes:

- Percentages may add up to over 100% because a youth may have multiple removal reasons.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Disproportionality in removal reasons among children re-entering out-of-home placement

Due to small sample sizes, removal reasons and some of the racial and ethnic groups were combined to assess disproportionality. For removal reasons, neglect, physical abuse, inadequate housing, parent incarceration and parent drug/alcohol abuse were combined. Caretaker inability to cope, child drug/alcohol abuse, and child behavior problem were also combined. For racial groups, Black Non-Hispanic and Multiracial were combined.

Among children re-entering in FY16-FY18, after controlling for age, there were no statistically significant differences (FY16 entry cohort).

Table 18. Disproportionality in most frequent removal reasons for children re-entering out-of-home placement in within 12 months of discharging to reunification, guardianship or living with a relative(s), FY16-FY18entry cohort

	White Non-Hispanic (reference group) (N=39)	Black Non-Hispanic (N=14)	Multiracial/other Non-Hispanic (N=10)	Hispanic (N=22)
Median age at initial removal	11	14.5	13	13
Removal Reasons				
Neglect	33.3%	7.1%	80.0%	27.3%
Parent drug/alcohol abuse	41.0%	21.4%	30.0%	9.1%
Inadequate housing	12.8%	0.0%	10.0%	0.0%
Caretaker inability to cope	7.7%	42.9%	10.0%	31.8%
Physical abuse	5.1%	0.0%	0.0%	9.1%
Parent incarceration	5.1%	0.0%	10.0%	0.0%
Child drug/alcohol abuse	2.6%	13.6%	0.0%	13.6%
Child behavior problem	33.3%	57.1%	20.0%	63.6%

** : odds ratio statistically significant compared to reference group (White Non-Hispanic), controlling for age.

Notes:

- Percentages may add up to over 100% because a youth may have multiple removal reasons. Removal reasons not shown include sexual abuse, clinical diagnosis, parent incarceration, parent death, abandonment, and relinquishment.
- Children with unknown race and ethnicity are excluded.

- For odds ratios, neglect, physical abuse, inadequate housing and parent drug/alcohol abuse were combined into one group. Child drug/alcohol abuse, child behavior problem and caretaker inability cope were combined into one group.

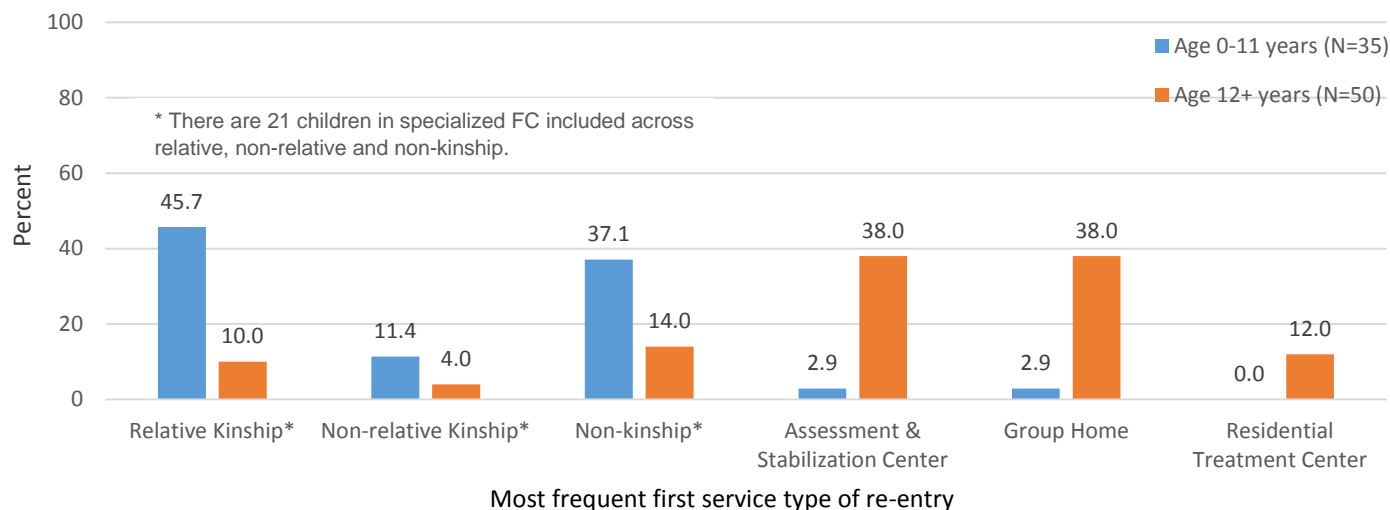

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: First placement types among children re-entering out-of-home placement

Children age 0-11 re-entering an out-of-home placement in FY16-FY18 most frequent first placements were relative kinship (45.7%), non-kinship (37.1%), and non-relative kinship (11.4%).

Children age 12 and older re-entering an out-of-home placement in FY16-FY18 most frequent first placements were group home (38.0%) and assessment & stabilization center (38.0%), followed by non-kinship (14.0%).

Figure 27. Percent of children re-entering out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), by most frequent first placement service types of re-entry and age at initial removal, FY16-FY18 entry cohort

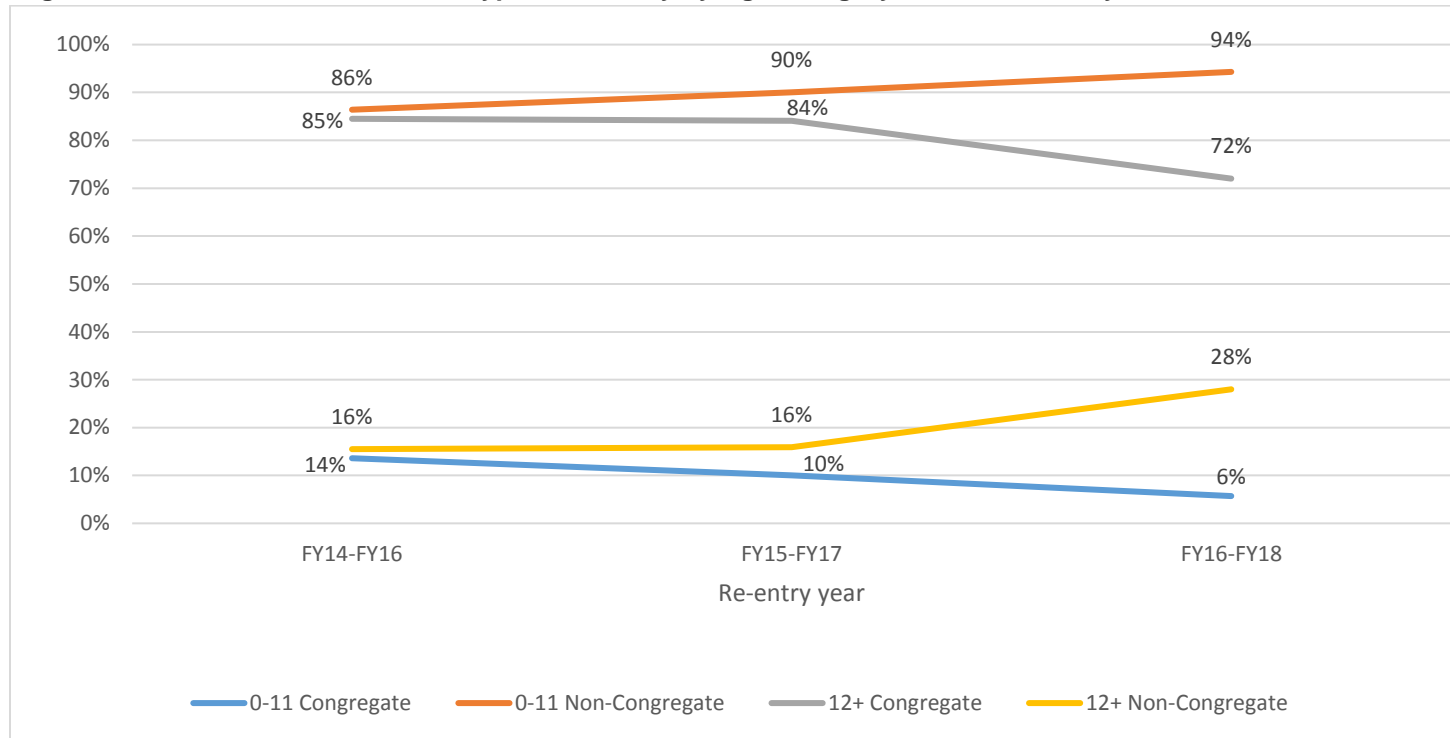

Notes:

- Placement service types not shown on above figure include acute residential treatment, independent living, semi-independent living, medical hospital and psychiatric hospital. Residential treatment center includes residential treatment center, residential counseling center, and residential treatment – substance abuse.
- Congregate care includes acute residential treatment, assessment & stabilization center, group home, medical hospital, psychiatric hospital, semi-independent living, RCC, residential treatment – substance abuse and residential treatment center.

* Of those re-entered within 12 months of discharging to reunification, guardianship or living with a relative(s), there are 6 children in FY14, 15 children in FY15 and 21 children in FY16 who re-entered into first placement service type of specialized foster care included across relative kinship, non-relative kinship and non-kinship.

Notes:

- Congregate care includes acute residential treatment, assessment & stabilization center, group home, medical hospital, psychiatric hospital, semi-independent living, RCC, residential treatment – substance abuse and residential treatment center.
- Some numbers are revised to reflect current data and may be different from last year's report.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Placement service type at previous discharge for the most frequent first placement service types of re-entry

A children's trajectory congregate to congregate— Approximately 90% of children whose re-entry first placement is congregate care were previously discharged from a congregate care setting.

A child's trajectory non-congregate care to non-congregate care – Approximately 80% of children whose re-entry first placement is a family-like setting were previously discharged from a family-like setting.

Figure 29. Percent of children re-entering into out-of-home placement within 12 months of discharging to reunification, guardianship or living with a relative(s), by placement service type at previous discharge for the most frequent first placement service types of re-entry, FY16-FY18 entry cohort

Notes:

Other congregate care includes placement type of residential treatment center, semi-independent living and acute residential treatment.

Children re-entering in FY14-FY18 within 12 months of discharging to reunification, guardianship or living with a relative(s), continued

FY16-FY18 Highlights: Median length of time (days) since previous discharge for children re-entering out-of-home placement

Children age 0-5 have a median length of time to re-enter of 205 days.

Children age 6-11 have a median length of time to re-enter of 101.5 days

Children age 12-16 had an increase in the median length of time to re-entry of 177 days in the FY16 entry cohort compared to 136.5 days in the FY15 entry cohort.

Data Source: U.S. Census population estimate for children under 18.

Notes:

- Children with out-of-state or unknown case addresses are excluded.
- If a child moved to a different address after removal, the case town may not reflect the town at the time of removal.
